Section I- Introduction

Hello, and welcome to my guide for Edits in the Game Boy Advance game, Fire Pro Wrestling 2. I hope you enjoy this guide, and find it helpful. I will only be offering up full profile and appearance info. If an Edit isn't based off of an in-game character, I will mark it with an asterisk and list some key moves for that character. I will also call the moves what they are called in the game to prevent any confusion. Keep in mind, some move names do not use their American name or definition. For example, a brainbuster in Japan is just a suplex, whereas in the U.S., it's a suplex that drops someone on their head. If you are new to the Fire Pro Wrestling (Firepro Wrestling in Japan) series, Edits are, for all intents and purposes created wrestlers. You can edit a character in the game, which is pretty much required if you want the correct appearance for the American characters in this game (and in Final Firepro Wrestling, which served as the basis for FPW 2.) You can edit the name of a character, their appearance, their moveset, their wrestling style, their endurance level, and even specify what moves the wrestler will use most often. If you are a wrestling nut, and pride yourself on picture-perfect created characters, this series is for you. Keep in mind, posting Edits can be quite time-consuming, I will probably post three-to-five edits per update on this FAQ. I will be separating Edits via a half-line length dotted line above/below them so you can find an Edit easily. I will also list a directory at the beginning of Section II listing the Edits available in this update. Sections will be set off with a full-line length dotted line.
