

# Jurassic Park III: The DNA Factor FAQ/Walkthrough

by thesmoothcriminal

Updated to v1.8 on Dec 15, 2001

JURASSIC PARK III's first published FAQ/STRATEGY GUIDE

PLEASE READ THE FOLLOWING PLEASE READ THE FOLLOWING PLEASE READ THE  
FOLLOWING!

My E-mail- the\_smooth\_criminal64@hotmail.com

If you are going to email me with a question, code, etc. PLEASE do the  
following:

If you are sending in a code, the subject title must be: "Code=J.P.3"

If you are sending in a question, the subject title must be:

"Question=J.P.3" (Or "Quest.=J.P.3)

If you are sending in correction, the subject title must be:

"Correction=J.P.3" (Or "Correct.=J.P.3)

If you think I should add any more to this FAQ, then put: "Add=J.P.3"

Doing these simple instructions will help me a lot if you follow them. Its  
not like it will give you a heart attack if you do it. It should only take  
about 5 seconds to do.

Titles surrounded by #s are chapters of this FAQ/Strategy Guide

Titles surrounded by \*s are sections of the chapters of this FAQ/Strategy  
Guide

FINAL 1.8= This is the final version of this FAQ! I have finally got a question to put in my FAQ (Frequently Asked Questions)!

Version 1.7= I have gotten I new email address so if you want to email me a code, then you will have to email me at the\_smooth\_criminal@hotmail.com.

Version 1.6= Its clean-up time! I am looking at the FAQ/Guide and making things neater and more organized, along with some new other things like a "strategies" section. This FAQ/Guide can now be found on cheatcc.com.

Version 1.5= I have added the rest of the levels to this FAQ/Guide!! I still need questions and emails from people so I can complete the "FAQ" section and "Thanks" section of this guide! This FAQ can now be found on Cheatplanet.com and a2zcheatc.com! 10-18-01

Version 1.4= WOW! This is my first FAQ and I am amazed at the progress it has made! 4 sites have it posted in only 4 days! Two of them asked me! Read the "Location" section of this FAQ to see where it is posted. I have added level 7! 10-02-01

Version 1.3= I have completed level 4 and added level 5 and 6! I also added a tip after each level in the walkthrough! This FAQ is now on gamefaqs.com! 10-01-01

Version 1.2= I have added level 4 to the walkthrough! I also put in some emailing rules that you MUST follow before you email me with a code, question, or correction! 9-30-01

Version 1.1= I have added a "Location" section so you can see the places where this FAQ can be viewed. I also added a "Dino File section"! Now you can read what the Dino File says about ALL of the dinos on the game! I have added levels 2, 3, and started level 4 on the walkthrough! I have taken out the diagram of the DNA capsule because it was causing too much trouble. My FAQ was excepted at cheatcodes.com! 9-29-01

Version 1.0= I have put up the Table of Contents, the story, the Basic info./controls for game, diagram of DNA capsule, the FAQ, the Strategy guide for level 1, put up the first secret that I found, the Strategies for Defeating Bosses, and the Contact/Legal Info. sections!! 9-28-01

#####

[2= THE STORY]

#####

A storm is brewing over Isla Sorna. Threading in and out of the lightning-laced clouds, an InGen Corporation plane makes its way toward the

landing strip. Hammered by fist-like winds; the plane struggles and disappears.

A few days later a search party hacks its way to the wreckage in the thick jungles of Isla Sorna. Only peices of the wrecked aircraft can be found - its precious DNA capsules has been scattered far and wide across the remote tropical outpost. Isla Sorna is ground zero for InGen's fantastic experiments with prehistoric predators. Mark Hanson and Lori Torres have been hand picked to retrieve the lost DNA.

#####

[3= BASIC INFO./CONTROLS FOR GAME]

#####

\*\*\*\*\*

{Controls:}

\*\*\*\*\*

L Button: Slide out Dino File on the World Map (after you see at least one dino)

Move base DNA capsule left

R Button- Pick up item

Hold down to crouch in place

Slide/roll whill running (with control pad)

Move base DNA capsule right

A button- Confirm selection

Start Game

Scroll thorough dialog

Go to selected location from World Map

Go to Dino Files when Dino File is open

Jump

Drop off ladder

Shoot DNA particle

B button- Cancel selection

Cancel map

Action: Use the currently equipped item or weapon

Jump Kick (with jump button)

Quick DNA strand rotation

Control Pad- Move character

UP: Run up to upper track

Climb up a ladder

Pull up when hanging from a cliff, log, or ledge

DOWN: Run down to lower track

Climb Down a ladder

Drop off a cliff, log, or ledge while hanging

LEFT: Run or crawl left (with crawl buton)

Jump left (with jump button)

Move injector left

Right: Run or crawl right (with Crawl button)

Jump right (with jump button)

Move injector right

Start- Pause game

Select- Not used

\*\*\*\*\*

{GENERAL INFO.}

\*\*\*\*\*

This game is a good game, but for Gameboy Advance, the graphics could have been a little better. All you do on the game is avoid Dinos and collect DNA particles. At the end of each stage (except for last two) you will take control of an injector and in front of the injector will be the DNA that you have to hit that is the same color as the one that is loaded into the injector. After you have completed the DNA capsule you will have created a new dino! Watch out for organisms in the DNA, if the injector is hit by one then you have to go back and to the level over! You can choose to be a man named Indiana Jone... er.. I mean Mark Hanson , or a woman named Lori Torres. I have only played as the man so far.

#####

[4= FAQ (Frequently Asked Questions)]

#####

Q= I am having trouble with defeating the T-Rex.

A= You must have it bite at you and then run away and shoot one shot at it before it can lift its head back up.

#####

[5= STRATEGY GUIDE]

#####

Note: I have only played as the man, Mark Hanson, so I don't know if the story is different with the woman, Lori Torres. If you know if the story is different between the both, E-mail me please!

\*\*\*\*\*

{LEVEL ONE: LAND OF THE GIANTS}

\*\*\*\*\*

Despite its name this area is mostly filled with small dinosaurs. Collecting the DNA particles should be easy, but watch out for bottomless pits!

In this level you will see your first dino, the Compy.

You start out with a rock in front of you with 3 DNA particles around it and a rock above you with some meat beside it. Collect those particles and run up and collect the meat (R button). Keep going right and you will see your first Dino, the Compy! It will be standing in front of a log. Throw some meat at it (B button) so it will be distracted. Go above the log and collect the DNA particles and then go back down and jump on top of the log and collect the DNA particle. Now go accros it and collect all the DNA particles in that area and keep going untill you reach a bottomless pit. Jump over it and you should be hanging from from the ledge on the other side, climb up (up on control pad) and collect the two DNA particles. Go to the rock above you and collect the knife and the DNA particle on it. Now go back down and climb to the top of the rock down there and let the compy chase you. Run back and then turn around and hit it with your new knife. Then collect the DNA particle between that rock and another one. Then go up and collect that DNA particle. Stay up there and collect three more particles. You should be in front of a log with a Compy on it it and there

should also be a log beneath you. Jump up and kill the Compy and run across and collect the DNA particles on it. Then after you have crossed it go back down and jump on the log to the left of you and kill that Compy. Collect the DNA particles and then head back right. Collect the DNA particle. There will be a rock above you and one to the right of you. Wait for a Compy to come down from the rock above you and slash it with your knife. Then go up from where the Compy came and go right and collect the DNA particle. Then go back down and jump on the rock to the left of you and kill the Compy and then collect the DNA particles. Go back right until you reach a log. Go up above the log (Up on control pad) and collect the two DNA particles and kill the Compy. Jump over the pit and collect two more DNA particles. Jump over the rock in front of you and collect the DNA particles on that rock. Keep going right and collect three DNA particles at the dead end at the pit. Now go back down and cross the log and jump over the pit. There should now be a rock above you and one in front of you. Go over the rock in front of you and then go up and kill the Compy(s) and go left and collect the heart and the DNA particle on that rock. Then go back right until you reach two logs, one in front of you and one on bottom. Cross the one on the bottom and collect the DNA particles and then go left and cross it again. Go up and cross that log and grab the DNA capsule!  
STAGE CLEAR

TIP FOR STAGE: Some DNA are located at below the edge of some pits. What you have to do is fall down and then move toward the edge. You should grab hold of the edge and get the DNA. Some DNA are located above rocks that you have to jump to get. Look very closely, because some of the DNA are green and blend in with the background.

You should have got:

BLUE: 09/09  
RED: 13/13  
YELLOW: 14/14  
GREEN: 13/13

MISSION COMPLETE

Now you will do the first DNA capsule stage!! The game will introduce you to this level and tell you how to play it. This DNA container stage is easy. The DNA rotates very slowly so you shouldn't have any trouble with shooting the particles. There are two organisms that shouldn't be much trouble to you.

The Dino that you created will be the Gallimimus.

10' long 150 lbs. 65 mil. years ago

Ostrich-like herbivore. Timid by nature, but will stampede if startled.

\*\*\*\*\*  
{LEVEL 2: THE GRASSLANDS}  
\*\*\*\*\*

The Grasslands are home to Gallimimus. Don't get caught in a stampede!

This is one tough level!

When you start go to the top lane and keep going until you get a DNA particle. Stay up there and move forward a little bit more. You should here a Dino shriek and then I Gallimimus will run away in the bottom lane. Jump over the log and collect the DNA particle. Go to the bottom lane and

wait for the Gallimimus to run by then go up to the top lane and get that DNA particle. Then jump over the next log and stay up in the top lane. A Gallimimus will run away on the bottom lane. Then move up to the next log and switch to the bottom lane and let a Gallimimus run by the top lane. Then go to the top lane and jump over the log, collecting the DNA particle. This next part is tricky. Jump over the next log and switch to the bottom lane. Run until the next log comes into view. Two Gallimimus will stampede at you. As soon as the one that is in the same lane as you gets right next to you, switch lanes! You should have just barely missed the Gallimimus running by on the top lane. Stay up on the top lane and collect the next DNA particle. Then jump over that log and switch to the bottom lane and collect the DNA particle. Stay down there and keep running until you get to the next log that takes up both lanes. Jump over that one and the one after that one. Go to the end of the rocks and then run behind them (going left).

Jump over the next log and keep running until you get to the next log. Don't jump over it. A Gallimimus will jump over you. Then collect the DNA particles that are above the next two logs. Go back down to the bottom lane and run until you reach the next log. Jump over it and crouch and let the Gallimimus jump over you. Wait until it runs off of the screen and continue on.. You should reach some small buildings that you can jump on top of. Avoid the Compies and collect all the DNA particles in that area. Then you should reach a very large fence. Collect the DNA particles until you reach a door. There will be a Compy next to the entrance. There is really no way to avoid it so just run past it the best you can and collect the gun and the two DNA particles at the end. Then turn around and shoot the Compy and go to the other end and collect the DNA particles. Then exit the fence and collect the DNA particles until you reach a log. Switch to the bottom lane if you aren't already in that lane and let the Gallimimus run past you. Jump over the log and collect the DNA particle and switch to the top lane and watch the Gallimimus run by. Go over the next two logs and collect the DNA particles and then go to the bottom lane and run until the Gallimimus passes and then jump over the logs until you see the DNA capsule! Don't get it yet, run past it and stay on the bottom lane and wait for the Gallimimus to pass at the top and then switch lanes so the Gallimimus on the bottom lane can run past. Jump over the log, run to the end, collect the 4 DNA particles at the end, run back, and collect the DNA capsule. STAGE CLEAR

TIP FOR STAGE: When crossing a log, look for DNA that is above your head that you will have to jump to get to. ALWAYS look above your head for DNA on a log. They can be hard to see if you aren't looking for them.

You should have got:

BLUE: 21/21

RED: 18/18

YELLOW: 17/17

GREEN: 15/15

MISSION COMPLETE

Now you will face your second DNA capsule stage!! The DNA still rotates slowly, but there is an organism that will try to hit the injector. Just move out of the way. The DNA will move down a little bit faster, but you should beat it with no prob.

The Dino that you created is a Brachiosaurus

80' long 70 tons 145 Mil. Years ago

The tallest dinosaur. Use its great height to reach leaves of tall trees.

\*\*\*\*\*

{LEVEL 3: RETURN TO JUNGLE OF GIANTS}

\*\*\*\*\*

Return to the jungle of giants to collect DNA particles and to find another base DNA. Now you'll find out how this area got its name!

I don't know why they made you come back here a second time. You should start out in the same place. One rock in front one above. Collect the DNA particle behind the one behind the rock in front of you and three on the rock above you. Go down and collect the DNA (past the second rock) and you should now be in front of a log with a Compy on it. There will be a Compy above the log so you can't go that way. Jump on the log and jump over the Compy and collect the gun. Turn around and shoot the Compy. There will be one behind you, you know what to do. Then cross the log and go up and shoot the Compy above that log. Keep going right until you reach a pit. Collect the DNA particles and go to the top lane and jump over the narrow part of the pit. Collect the particles around it and then go to the rock on the top lane and shoot the Gallimimus as it runs at you. Collect the particles. Stay up on the top lane and shoot another Gallimimus. You should be out of ammo. Go back down and go left and run over the collection of rocks, collecting the particles. Then go back up and go right. Jump over the Gallimimus that is running at you. Keep going right and cross the log and jump over the Gallimimus at the end. Then go up and cross the log above the one you just crossed. And collect the DNA particles on it and go back. Go to the rock and crouch so the Gallimimus jumps over you. Then collect the DNA on that rock and keep going right and jump over the Gallimimus (on the top lane). When you reach a pit switch to the bottom lane and collect the DNA on the collection of rocks. Then go back right and collect the DNA around the pit and cross the and collect the DNA on the other side. Get the meat and run on the bottom lane. Throw the meat at the first Compy you see and then go up and jump kick the Compies in the rock, making them run away. Collect the DNA on the rocks. Then go back right and collect the DNA around the pit at the end and cross the log. At the end of the log, jump over the pit. Go over the rock in front of you and go to the top lane and get the heart behind the rock. Try to jump kick the Compy twice that is up there. Go back down and when you reach yet another log jump on it and kick the Compy (on the bottom lane) and collect all the DNA at the past the log. Cross that log again and go to the top lane and cross the log above that one. Now you face a very hard challenge, the Brachiosaurus. It will pick up its two feet in the background and move them, jump whenever they hit the ground. Then it will pick up its foot in front of you. Slide under it (over and R button) then it will pick up the other foot. Do the same. Then try to time your jumps right with every foot. After the Brachiosaurus is gone, a DNA capsule magically appears! How did that happen!?!?!? We, may never know, so just grab it. STAGE CLEAR! That was one hard level!

TIP FOR STAGE: Look all over the rocks for DNA and at the end of each log. Some DNA are located below the edges of some pits. Drop off and move toward the ledge and you should grab on and collect the DNA.

You should have got:

BLUE: 09/09

RED: 13/13

YELLOW: 15/15

GREEN: 13/13

MISSION COMPLETE

Now you will play yet another easy DNA capsule. The DNA still rotates slowly so you shouldn't have a prob. with that , but watch your guard, there are three organism flying around the screen! Try not to get hit by one!

You just created the Velociraptor! Yippee!! (Where is the hair on its head from the movie!?)

6' long 100lbs. 75mil. years ago

Intelligent predator. Hunts in packs. Armed with razor-sharp claws and teeth.

\*\*\*\*\*

{LEVEL 4: RAPTOR PENS}

\*\*\*\*\*

The Raptor Pens have been overrun by escaped raptors. They are swift and relentless so use caution while proceeding through this area!

When you start go right until you reach a small building whit two DNA particles on it. There will be a raptor trapped in a cage underneath you! Don't you think it would be dead after all these years!?!?! There will be another raptor next to the cage that is free, so you will have to watch out for that one. Jump down (trying not to land on the raptor) and switch to the top lane while running right. When the raptor switches to the top lane with you, switch to the bottom one until you reach the staircase. Go to the top lane and collect the DNA particle above the staircase and then go back down and climb the staircase. When you get to the top run right until you see another raptor. Repeat the same procedure of switching lanes and go down the hole and collect the DNA and the shocker! Now you can fight back! Jump out of the hole and keep going right. If that raptor that you saw last is trying to get you, the give it to 'em! Then run to the next hole and drop down and collect the next two DNA. If there is a raptor there, shock it and run to the next hole. You should see a staircase that goes down there and a Raptor that is walking right. Get even with the staircase and stand at or near the top step. The Raptor should chase you. When he does, go down to the bottom lane and fall down into it. You should have lost the Raptor. Collect the DNA on the steps and in the hole and then jump back out. Then you should reach another hole. Fall down it and shock the raptor and collect the DNA that is making an arch in the sky. Then go to the wall from which you fell down from and go to the bottom lane and behind the wall with a fence in the middle. Then run up the stairs past the wall and collect the DNA. Once you reach the top, run right until you reach another raptor. When it chases you, run toward the staircase and then duck a little bit away from the top step. The Raptor should try to do a jumping claw attack, but will miss you and fly down the stairs. Once that is done and taken care of go right. When you reach the next hole jump down, shock the raptor, and collect the DNA. Jump out, go up the stairs and collect the DNA on them . Run until you reach the next hole and you should see a raptor, try to make it jump out of the hole and let it chase you until you get to the stair case, crouch and let him fly! Then go down the hole, collect the heart and the DNA and jump out. Run until you reach the next raptor. Let him chase you for a short time and then crouch and let him jump over you and IMMEDIATELY run right and you should have lost him. Fall off the ledge and jump and collect the first DNA underneath it. Then go down to the bottom lane and then let the next raptor chase you and crouch and let him jump over you and IMMEDIATELY run right so you will lose him. Collect all the DNA under the ledge that you fell off of and the DNA at the end. Then go back right and use the same technique to lose the raptor. Then go

right until you reach the capsule and pick it up. STAGE CLEAR.

TIP FOR STAGE: When looking for DNA search above the holes. There will be DNA over almost all of them on the top lane.

You should have got:

BLUE:10/10

RED: 10/10

YELLOW:10/10

GREEN 10/10

MISSION COMPLETE

This DNA capsule stage will be a little harder. The DNA still rotates slowly, but there is an organism that will follow the injector. Just shoot it with some DNA that you don't need.

You have just created the mighty triceratops.

30' long 6 tons 65 Mil. years ago.

Large herbivore. Its 3 horns & bony frill make it dangerous if provoked.

\*\*\*\*\*

{LEVEL 5: HATCHERY}

\*\*\*\*\*

Due to neglect and over breeding the once magnificent Hatchery lay ruined. Search high and low for hidden DNA and confirm reports of large quadrupeds spotted roaming the structure.

More Dino fun! When you start, run to the top lane and jump up and collect the DNA. Then run right and collect the DNA in both lanes. Then you should encounter some Compy. Jump kick them and let them run away. In that area there will be a striped wall with a ladder you have to jump to and climb (the wall has a red DNA by it). Climb that ladder and when you reach the top go right and collect the three DNA. Then go back left and jump as soon as you get to the ladder. You should collect two DNA and then grab on to a ledge. Collect the DNA on that platform. Then jump and grab onto the next platform. Pull yourself up and jump kick the two Compy twice and then collect the shocker at the end. Fall off, NOT jump off, so you can collect all the DNA. CRAP!! Now you are back at the beginning! When you get to the part with the ladder this time go left when you reach the top. Collect the heart and jump and try to make yourself hang on to the ledge of the next platform so you can collect the DNA. Look at that scary raptor! Don't worry about him right now. Fall off and collect the DNA and go back left. Climb up the ladder for the third time and go left to the platform with the raptor on it and shock it to and discover that there are two on it! Then jump off, NOT FALL off, and collect the DNA. Then go right and collect the DNA and when you reach the heart, go to the very right of that platform and jump and collect the DNA. What was that!?! That thing sounded mean? Let's go down and take a look.. Well I'll be darned! It's a triceratops! Shock it three times and knock it out. Then go right and collect yet another shocker and find another Triceratops. Just run right past it on the bottom lane. It won't do anything! Then keep going right until you reach a ladder. Climb up it and go right and kill that raptor, or avoid it. Then go down and kill the next two raptors and pick up the DNA capsule. STAGE CLEAR

Tip for this stage: Look very closely to find DNA. Some is blended in with

the background and behind some egg storing thingies.

You should have got:

BLUE: 14/14  
RED: 12/12  
YELLOW:14/14  
GREEN: 13/13

MISSION COMPLETE

Now this is where the fun begins! The DNA rotates at a good speed and moves down faster. To top it off, there are three organisms shooting around the screen, luckily they don't follow the injector.

You created the scary T-rex! OH NO!!

40' long 8 tons 65 Million years ago.

One of the largest carnivores. Its jaws are filled with saw-edged teeth.

\*\*\*\*\*  
{LEVEL 6: RETURN TO THE RAPTOR PENS.}  
\*\*\*\*\*

Return to the Raptor Pens to get the base DNA to find out what could be fearsome enough to scare raptors away from their own territory! (As if we don't know)

There are absolutely NO raptors in this level.

When you start out running right like you always do, there will be a Galimimus running past you on the other lane! Then jump on top of the building to find a Gallimimus is up there! Just jump over it. Then go to the stairs to find that a Gallimimus is running down them. Switch lanes and go up the stairs after the Gallimimus runs by. Then at the first hole, there will be a Gallimimus at the top lane and in the hole. Get a little bit away from the hole (far enough that you can jump over the Gallimimus) and jump over the Gallimimus. Go down the hole and collect the DNA and then keep going to find another hole. Jump over the Gallimimus. Pick the DNA and go on to find yet another hole. Go to the bottom lane and let the Gallimimus runs up the stairs. Pick up the DNA and go a little right to find another Gallimimus. Jump over it. Then, after collecting the DNA, jump out of the hole and fall off the ledge and go right (on the bottom lane and jump over the Gallimimus. Collect the DNA arched in the air and then go back to the ledge you fell off of and then push up and go to the top lane. You should have just missed a Gallimimus. Then go to the next hole, this will be kinda hard so just stay with me hear. There will be a triceratops in that hole. When you fall down there that is the first time you will see it. Watch it raise its foot and when it hits the ground run and jump. You should have jumped over it. Go right, collecting all of the DNA. Where have all the Gallimimus gone!? Keep going and fall off of the ledge. Then jump and collect the DNA under the ledge. Near the end you will see a Triceratops. Do the same technique. Watch its foot and when it hits the ground run and jump over it. Then at the end pick up the gun. Then, when you reach the gun, go right until you reach..... THE T-REX!! Read the "Boss Strategies" section of this FAQ and read how to defeat him. Then another DNA capsule magically appears! How did that happen? Is it linked with the DNA capsule in "Return to the Land of the Giants"? We may never know.. so just pick it up and do that DNA capsule stage. STAGE COMPLETE

TIP FOR THIS STAGE: There are none! It all just goes with the flow!

You should have got:

BLUE: 10/10

RED: 10/10

GREEN: 10/10

YELLOW: 10/10

MISSION COMPLETE

Boy are you in for a wild ride!! The DNA rotates stupidly fast, and there are three organisms! They don't follow the injector though, so this should make it a little bit easier.

You just created the friendly Pteradon. (Ya right!)

30' wing span 120 Lbs. 80 Mil years ago.

Flying pterosaur. Swoops down from great heights to attack its prey.

\*\*\*\*\*

{LEVEL 7: SAVAGE LANDS}

\*\*\*\*\*

In the branches of the tall trees you will find refuge from terrestrial dinosaurs, but be on the alert for the winged terrors that rule the sky!

When you start out, go to the top lane and jump on top of that ledge and collect the DNA on it and then collect some after you reach the end of that one on the ground below you. Then jump on top of the next ledge and collect the two DNA. Then you will find that a tree is blocking you. Then go back left until you reach the end of that ledge. Fall off of it and then go right. Collect the DNA until you see a velociraptor. Go to the top lane and jump on top of the left ledge. Climb all the way to the top while collecting DNA until you reach the tree that was once blocking you. Climb up the vine that is growing up the side of the tree and collect the DNA on the right branch and then go left. A Pteradon will attack you. Their flight pattern is up, then down, then up, then down, and so on. Jump over them when they go down, or go under them when they go up.

Go until you reach the end of the right branch and collect the shocker. Then go right and fall off and keep going until you reach the place with the velociraptor. Then, still on the top lane, jump on to the next ledge and collect the DNA. Then when you reach the right side of it, fall off and go to the bottom lane and jump on top of that ledge. Climb up the tree and collect the DNA to the left of you and then go right and jump and grab on to another branch (you should have collected some a DNA when you grabbed on). Then climb up and go right and fall off the branch. Collect the DNA down there and climb back up the tree. You should see a Pteradon hovering above you. Try to dodge it as best as you can and jump on to the branch to the right, then to the left, then to the right. Then jump on to the branch above you and collect the three DNA hovering in the air. Then go right and dodge the Pteradon. Then fall off and kill the raptor with your shocker and then go to the bottom lane and kill the raptor down there. Keep going right until you reach the DNA. Collect that one and then switch to the top lane and collect the next one. Then go back down and run right until the bottom lane ends with a ledge. Go up and collect the DNA and jump on to the left ledge. Collect the DNA up there, climb up the tree, collect the DNA to the right of you and then go right. Dodge the Pteradon and go to the left of

the branch. You will see a Pteradon hovering over some DNA. Run and jump off. You should miss the Pteradon because it will swoop downward, allowing you to collect the DNA. Then you will fall on a ledge. Collect the DNA and then pick up the heart. Fall off of that ledge and then switch to the bottom lane. Go right until you have to jump on a ledge. Jump on it and climb up the tree. Then go to the end of the right branch and collect the DNA. You should see another ledge to the right of you. Jump on it and switch to the top lane. Dodge the Pteradon and collect the DNA. Then jump off at the end and climb up the tree. Then collect the DNA at the top of that tree and then jump on to the next branch, the Pteradon that was hovering there shouldn't have hurt you. Climb up that branch and run right.

When you reach the end of the branch there will be a Pteradon. Jump over it and fall to the bottom. Look there is the DNA capsule! Don't get it just yet. Go down to the bottom lane and run left and collect the DNA and kill the raptor. Keep going left and you should see a DNA and a shocker on the top lane between two ledges. Go up and collect them and then go back down and keep going left until you are able to go to the top lane again. Collect the Heart and the DNA still keep going left. When you reach a dead-end, collect the DNA that is between two ledges on the top lane. Then go back right and get the DNA capsule. STAGE CLEAR

You should have got:

BLUE: 10/10

RED: 16/16

YELLOW: 12/12

GREEN: 14/14

MISSION COMPLETE

This DNA Capsule stage is just like the last one. The DNA rotates stupidly fast with three organisms, except that it moves down faster.

You just created the thickheaded Pachycephalosaurus

18' long 800 pounds 65 Mil. years ago,  
Head-butting herbivore. Lowers thick skull creating sturdy battering ram.

\*\*\*\*\*

{LEVEL 8: PERILOUS HIGHLANDS}

\*\*\*\*\*

The Perilous Highlands are home to rugged, hardy dinosaurs. There are areas with obstacles, which may seem impassable, but using your head will get you a long way..

When you start out, go left and collect the DNA behind you. The jump on the ledge to the right of you and switch to the top lane. Stay away from the Pachy. Lead it right until you reach the rocks, make it bash them down. Keep running right and collect the DNA until you reach a ledge. Jump off so that you can collect the DNA that is floating in the air and when you land on the next ledge, lead the Pachy (Pachylacephalosaurus) so that it bashes the rocks down and keep leading it until it hits the next layer of rocks, thus knocking them down. Collect all the DNA and avoid the next Pachy and when you reach the ledge, fall down and make yourself hang on the ledge, so that you can collect the DNA (Note: You have to be on the bottom lane). Then drop down and avoid the Pachy and collect the bombs and the heart. Then go left and climb up a ladder. Ignore the DNA capsule and keep going left and fall off that ledge and collect the DNA down there. Then climb up the next ladder, avoid the Pachy and then drop back down avoiding that Pachy

and collect the DNA there and then fall down and collect the DNA that is located along the ladder. When you reach the bottom, get the heart IF YOU NEED IT and collect the DNA. Then climb up the ladder and you should see a cage-like structure. Avoid the Pachy and collect the heart ONLY IF YOU NEED IT. Go behind the cage-like structure and jump off and collect the DNA that is in the air. Climb back up and go right until you reach the next ladder. Climb up and collect the next 2 DNA. Fall down, avoid the Pachy, and collect the DNA. Don't climb up the ladder. Instead, go back right and collect the hearts, because you will probably be needing them right about now and go until you reach the DNA capsule and pick it up. STAGE CLEAR.

TIP FOR STAGE: To avoid the Pachys, you have to switch lanes when it is charging after you. They can't change lanes while charging. If you are in a place that is hard to escape one, try to make it charge into a wall. It will hit the wall and fall down, giving you some time to get away.

You should have got:

BLUE: 12/12

RED: 16/16

YELLOW: 13/13

GREEN: 14/14

MISSION COMPLETE

This next capsule stage shouldn't be a problem. The DNA rotates slowly enough, but watch out for the 4 organisms shooting around the screen! Also the DNA moves down a lot faster, too so watch out for that also.

You created the poisonous Dilophosoraus.

10' long, 200 lbs., 185 mil years ago.

Carnivore that spits corrosive venom. Displays its frill when intimidated.

\*\*\*\*\*

{LEVEL 9: INGEN LAB}

\*\*\*\*\*

The Ingen labs have been long abandoned yet some of the equipment remains running. Beware of hidden traps and new dinosaurs that attack from a distance with venomous spit!

When you start out, jump on the platform in front of you, avoid the Dilo (Dilophosoraus) and collect the DNA. Jump down, collect the DNA and climb up the ladder. When you reach the top, jump left and when you see the Dilo, make it run next to the wall and corner it. Jump kick it and when it hits the ground jump and kick it again. Repeat the process until you knocked it out. Go down and collect the knife and go back and jump over to the right part (make sure you are on the top lane so you can collect the two DNA above the place you jump over. Collect the DNA that is behind the two containers that has some kind of fizzy liquid/substance. Jump to get them, you should be able to see them, they are not hidden. Collect the rest of the DNA and drop down on the small ledge and collect the DNA there, but you can't collect the DNA next to you for some reason so drop down. When the laser shuts off, go down and jump to collect the DNA that you couldn't reach. Then run right and collect the DNA when the laser shuts off and when you reach the end run up to the button and automatically turn it off. Then go right, get the heart, and jump on to the ledge. See the DNA above those two containers? Well there is goop under them that hurts you if you touch it.

Jump up and collect one of the DNA and then push back on the control pad. You should have missed the goop. Then switch to the bottom lane and go to the next one on the other side while avoiding the Dilo. Switch to the top lane and repeat the procedure to get the DNA. Then run right and jump off of the ledge so you touch the wall and you should fall and collect two DNA. Then run left and collect the DNA behind the container and then wait for the laser to turn off and switch to the bottom lane, run past the wall and run up into the new room. Collect the first DNA and jump over the goop behind the container and collect the DNA there. After that, wait for the laser to shut off and go and collect the DNA on the bottom lane. Then go to the top, collect DNA, go to the bottom when the laser shuts off, collect the DNA. Then run right and push the switch when the laser shuts off and then go to the next room to the right. Collect the DNA there and go back left until you reach the place where you fell down from. Collect the DNA and the heart behind the container and climb up the ladder. When there is DNA beside you, climb up a bit and jump off and collect the DNA and then move back to grab back on to the ladder, repeat this procedure with the rest of the DNA. When you reach the top, jump to the left platform and switch to the top lane. Jump back and collect the DNA and then jump on the ledge that you just came from. Run left and collect the heart behind the Dilo. Drop down, collect the gun, jump to collect the DNA, and go left again. Switch to the bottom lane and go left and collect the DNA and kill the raptor. Then keep going left and collect the next DNA and kill the raptor. Then go to the top lane, jump and collect the DNA and then go to the platform. When the raptor starts chasing you, duck and let it jump over you when it tries to do the jumping claw attack. Then IMMEDIATELY run right. Jump and collect the DNA in the air until you reach the end. Go back either way (going left I prefer going on the bottom lane because the raptor won't be able to get to you on the bottom lane.). Jumps on the ledge, collect the DNA, switch to the top lane, and jump on the platform. Jump over the goop, collecting DNA the whole time and then jump off the ledge that you land (going left) so you won't touch the goop at the bottom. Keep running left, collect the DNA and the gun, climb up the ladder, and jump to the next platform. Run right until you reach the door in the fence and go in and run left. Jump on the next platform and shoot the Dilo from there. Then jump and collect the DNA and then go back right. Jump on the next platform and shoot the raptor when it comes after you. Collect the DNA in that area and avoid, or shoot the next raptor. Go right, collecting DNA and ignore the DNA capsule and climb up the ledge. Avoid the Dilo or shoot it and collect the DNA behind the container and the DNA on the bottom lane. Then go back to the DNA container and pick it up. STAGE CLEAR

TIP FOR STAGE: Always look behind the big containers for DNA.

You should have go:

BLUE: 18/18

RED: 22/22

YELLOW: 17/17

GREEN: 17/17

MISSION COMPLETE

This DNA stage is a little easier than the last one, there are three organisms, and two follow the injector, and the DNA falls down really fast so be quick on this stage.

The Dino that you created was the Stego (Stegosaurus)

25' long 5 tons 145 mil years ago.

Herbivore with plates along its back. Spiked tail devastating when swung.

\*\*\*\*\*

{LEVEL 10: ANCIENT FOREST}

\*\*\*\*\*

Don't let the tranquility of the Ancient Forest fool you. The Dinosaurs that live there will defend their home with ferocity and one of them is rumored to attack with a small typhoon!

When you start out collect the DNA around you and then go right. Switch to the bottom lane and collect the DNA and fall down into the small hole and collect the DNA. When the Pachy charges at you jump out. Then switch to the top lane and go behind the tree. Jump and you should've got some DNA. Jump twice because you may have missed some DNA that you can't see. Then go to the other end of the small hole and drop down and collect the DNA there. Jump back out and go right again. Avoid the Pachy and go to the next small hole. Collect the DNA down there and jump and collect the DNA behind the tree, Pick up the bombs. Go right and collect the DNA that you see until you find a Stego. When it attacks you, jump over the typhoon and throw a bomb. Repeat this until it is down. Collect the DNA and jump on the next ledge and collect the DNA in front of you and go back left. Fall into the small place you came from (stay on the top row the hole time) and jump out of there on the left side. Run and collect the DNA until you run into another Stego. Repeat the process of throwing bombs. Then run past it and collect all the DNA until you reach the place where you were at before. Go back to where you saw your first Stego and jump out of that place and then jump on to the next ledge. Collect the DNA on the ground there and jump to collect a DNA that is hard to see that is in front of a tree. Then drop back down, fall down the ledge, collect the DNA down there, jump out, switch to the top lane, collect the DNA, go left, and get the DNA hidden behind the tree. Go back right and stay on the bottom row and collect the row of DNA in front of the rocks (you have to jump to get to them). Then go to the top row and collect the DNA near the trees. Then go right (avoiding the Stegos) until you reach the DNA capsule and pick it up. STAGE CLEAR

TIP FOR STAGE: Always look around trees for DNA that might be hard to see or that is hidden.

You should have got

BLUE: 12/12

RED: 14/14

YELLOW: 14/14

GREEN: 09/09

MISSION COMPLETE

This DNA container stage should be easier. There are four organisms, with two of them chasing you, but the DNA rotates very slowly and should move down slower.

You created the Ankylosaurus.

17' long 5 tons 65 mil years ago

Armored herbivore. Makes up for its slowness with its massive club-tail.

\*\*\*\*\*

{LEVEL 11: RETURN TO PERILOUS HIGHLANDS}

\*\*\*\*\*

Return to the mountainous regions of this area to retrieve the final base DNA. It lies on the lair of a slow yet formidable dinosaur.

I have no clue why you come back here!!! Collect the gun behind you and leave the bombs. Jump on to the platform across from you and dodge the Pteradons and collect the DNA until you reach the end. Jump off and you should land on a platform. Shoot one of the Pteradons and dodge the other. Then run right, shooting/dodging Pteradons in your way while collecting DNA.

When you reach the end, fall off and push left on the control pad so you won't land on the Ankylosaurus and ignore the DNA capsule. Dodge the rocks and go left and climb up the ladder. Collect the DNA at the top and fall down and collect the DNA and the heart at the bottom. Climb up the next ladder, and dodge the Pteradons and collect the DNA. Jump down, dodge the Pteradon and collect the DNA. Then fall down, collecting the DNA along the ladder and collect the hearts, you are probably needing them. Climb up the next ladder and collect the DNA at the top and then go behind the cage-like structure. Jump and collect the DNA behind there that is floating in the air. Then go back in front of it and jump off so you can collect the DNA as you fall. Get back up and go right and climb up the ladder. Collect the DNA at the top. Fall down, dodge the Pteradons and climb up the ladder and collect the last of the DNA. At the top collect the bombs and fall back down. Go to the DNA capsule and kill the Ankylosaurus for making the game harder if you want to. Pick up the last DNA capsule! STAGE CLEAR

TIP FOR STAGE: Make your gun useful when you run into Pteradons that are in your way before you make them dive at you so you can dodge them. That way you won't have that many to dodge.

You should have got:

BLUE: 12/12

RED: 12/12

YELLOW: 13/13

GREEN: 11/11

MISSION COMPLETE

This DNA capsule stage is just like the last one. Slow rotating DNA that moves down at a good speed with four organisms with two that follow the injector.

You created the Spinosaurus!!!

70' long 12 tons 100 mil years ago.

Largest Carnivore in Jurassic Park. Can eat most prey in a single bite!

\*\*\*\*\*

{LEVEL 12: RETURN TO SAVAGE LANDS}

\*\*\*\*\*

The Spinosaurus is loose and on a rampage. Escape through the treetops of the Savage Lands and make a break for the runway!

This is pretty easy for the last stage. Try not to get too close to the Spinosaurus or else it will snap at you. When you come to two tree branches that make a bridge, be prepared for the Spinosaurus to surprise you. Some

times he will back away to where you can't see him and he will show up on the other side of you and snap at you, but you have plenty of time to dodge this. Other times he will duck underneath the bridge and slash at you with his fin. Watch out because sometimes he will slash twice in the same spot. All you have to do is be careful and you should beat him in no time.

\*\*\*\*\*

{THE END}

\*\*\*\*\*

I will not put the end here. It is too much of a spoiler. There is a last level after level 12, but there is no strategy to it. All you do is run the whole time, and if I wrote about it here, then it give away the whole ending.

#####

[6=CODES AND SECRETS]

#####

This section will be used for codes and secrets THAT DO WORK. E-mail me if you have any. Before the code or secret is put up, I will try it myself. If it works, then it will be put up and the person who sent it will be given full credit in my "Thanks" Section of the guide. Those of you who send me a bad code or secret will not be given any credit what so ever, but you will still be free to send in more, because how am I supposed to know that you knew it was fake or not?

\*\*\*\*\*

{HARDER GAME:}

\*\*\*\*\*

Beat the game the first time and then play the same file again. You will start back at the first level again, but this time there will be more dinos and the DNA particles will be located in different locations.

#####

[7=BOSS STRATEGIES]

#####

\*\*\*\*\*

{FIRST BOSS= T-REX}

\*\*\*\*\*

Level: Raptor Pens (second time)

This boss isn't too hard. You wait for him to bite at you and you just run away, turn around and shoot one shot at him in the head. After about 5 shots he will run away. If you run out of ammo, you can jump kick him, but that is very hard to do. I have only kicked him once, all the other times he has bitten me before I can kick.

\*\*\*\*\*

{SECOND BOSS=SPINOSAURUS}

\*\*\*\*\*

Level: Savage Lands (second time)

This is pretty easy for the last Dino that you face. All you do is run away from him and throw bombs at him. Be careful when you get to the bridge, he will stop and start snapping at you or go underneath you and try to hit you

with his fin.

```
#####  
8= DINO FILE  
#####
```

This section will allow you to view the whole dino file off of the game!

```
*****
```

```
{Compsognathus (Compy)}
```

```
*****
```

Very timid due to small size. Only attacks when your back is turned. May attack in packs if disturbed

```
*****
```

```
{Gallimimus}
```

```
*****
```

Too fast to outrun. Change lanes or crouch behind objects to avoid. Jump over them as a last resort.

```
*****
```

```
{Brachiosaurus}
```

```
*****
```

Use your sliding technique to avoid its massive legs. Beware of flying debris kicked up by the shockwave.

```
*****
```

```
{Velociraptor}
```

```
*****
```

Avoid deadly raptors whenever possible. If you have no weapons crouch to evade its jumping claw attack.

```
*****
```

```
{Triceratops}
```

```
*****
```

Attacks only when provoked. When you see its warning display run away fast to avoid its devastating bull charge.

```
*****
```

```
{T-rex}
```

```
*****
```

Make sure to be well equipped before facing the mighty T-rex. Its body is invulnerable so find its weak spot.

```
*****
```

```
{Pteradon}
```

```
*****
```

Pteradons attack in varied patterns. Learn their flight behaviors to avoid their swooping attacks from above.

```
*****
```

```
{Pachycephalasaurs (Pachy)}
```

```
*****
```

Their ability to crush enemies can be used on obstacles also. Lead them to large boulders, which block your path.

```
*****
```

```
{Dilophosaurus}
```

```
*****
```

Displays its frill when ready to spit deadly venom. Avoid these projectiles and the puddles they leave on impact.

\*\*\*\*\*

{Stegosaurus}

\*\*\*\*\*

A swing of its body creates a fierce whirlwind as dangerous as its spiky tail. Attack from a distance.

\*\*\*\*\*

{Anklyosaurus}

\*\*\*\*\*

Beware of falling rocks when it hits the ground. Its armor is strong, but any heavy impact will do damage...

\*\*\*\*\*

{Spinosaurus}

\*\*\*\*\*

Not much is known about this large and terrifying dinosaur. Surviving its onslaught will take great skill. (Yeah right)

#####

9=Strategies

#####

This part of the FAQ/Guide will tell you how to defeat some enemies if you don't have any ammo.

You can beat a Compy(the small green dino) by jump kicking it twice (you have to kick right when you reach the Compy)

If you run into a Dilo (the venom-spitting Dino) jump kick it and when it starts getting back up, jump kick it before it gets all the way up

If you run into a raptor and you are at the top of a stair case, let it chase you to the last step and crouch and it will jump down the stairs, allowing you to get away.

You can easily jump over a Galimimus if there is no other way to escape it.
