

Mega Man Battle Network 2 Save State Hacking Guide

by Mastersord

Updated on Nov 8, 2002

This FAQ Copyright 2002 Mastersord. This FAQ is written by Mastersord (mastersord@hotmail.com). You cannot alter it or copy it in any way without my permission. if you wish to host it on your website, please e-mail me at mastersord@hotmail.com

This FAQ is how you can have any folder you want.

The first section is for hacking a save state for the ROM of this game.

I added a list of GameShark Advance codes for thos of you who have an actual GameBoy Advance and an actual cartridge of the game can enjoy this incredible break-through in being cheap. Remeber that annoying friend who whoops your butt every time you play him/her? Try them again with this under your belt!

I've given HankChillx permission to re-print my work when he finishes his code hacking FAQ.

Version 3.0 written 11-08-02

////////////////////////////////////

Here is how you can hack your save state from within VisualBoy Advance for Megaman Battle network 2

1. Acquire ROM and emulator. VisualBoy advance can be obtained in a number of places. I hope i'm allowed to post this.
2. use cheat list or add cheat (depending on what emulator you use. Preferably it supports this type of editing) command
3. enter the 8 digit addresses listed below depending on what you want to change. The Chip ID values are listed in 4-digit hex code or signed value. Make sure the cheat search function is set to 16-bit or you can only get upto 255

note: Chip code seems to be independent of chip ID so you can theorhetically have any combination you want! It works! I made a bunch of AquaBlde Ls so I know it works!!

note: With these vlaues, you can also have a folder of 8 or more of one type of chip. That means design folders to your heart's content!

note: These are VBA Hacks for the ROM of Megaman Battle Network 2. They are not Gameshark or code Breaker codes. Please don't ask me for such unless you tell me how I can convert them using my PC.

Note: Do not ask people on the boards about how my codes work. Use some neurons and figure out that they work just like every other save state hack out there. only difference is that these require no master code, and can be entered on the fly.

V2.01 written 10-10-02

-Added new tutorial to explain codes

v3.0 written 11-08-02

-Added GSA codes so that people with the actual game can use my work.

Megaman Battle Network 2 GameShark Advance codes: Hack your Battle folder.

To use these codes, just type them into your GameShark Advance and remove the space. All codes are in Hexadecimal format which means none of the

letters are higher than "F". If you see a "0", it is the number "0" and not an "O" or a "Q". It could be a "D" if you have bad eyes.

These codes allow you to modify the first slot in your battle folder. It may seem useless at first, but bear with me here. When you modify the chip, anything you put in the first slot will be changed to whatever you modified. I call it the chip duplication trick. It's simple:

Enter in the codes for chip and code you want. Start the game with the code on. Go into your battle folder. Then finally, swap the chip in the first slot with the chip you want changed. As soon as you move the arrow after the swap, the chip will magically change into the same chip you had in the first slot, and now you have 2 of the modified chip.

you probably want more than one type of modified chip right? Well, you can turn off the code and the modified chips stay. You can even save them! Now how do you make a different chip without losing the other chip you modified? Easy! Turn off the first code while the game is still running, or just save and reset, but remember to move the modified chip out of the first slot! Then you can modify the first slot again.

Why am I telling you to do this? Because I just spent my entire day compiling this list of codes for just the first slot and I don't want to do it another 89 more times or even another 29 more times. Besides, if you want to put more than one of a certain chip, this technique is easier than entering 60 codes to build a folder by hand.

This list is a lot longer than just the 260+ chips in the game itself. There are also all the PA chips and 5 dummy chips. The PA chips (Program Advance) are just like your PA techniques, except you don't have to set them up all the time, and you can re-use them just like regular chips. Now your friend who beats you netbattling all the time will have a little surprise in the next match. Give him 30 Darkness PAs! Yes, they save too! You won't need to set up the GSA before the match so he'll/she'll never know!

One more thing: If the chip type doesn't exist with the code you gave it, is a PA chip, or a dummy chip, do not put it into your sack, or it will disappear. I learned that the sack and the folder store chips differently: The folder has 30 32-bit addresses which tell each slot in the folder, what it has and what code it has. The sack is composed of a ton of addresses which tell the sack how many of each chip it has. When I move a chip to the sack, the game looks for the 8-bit sack address for that chip, and adds +1 to its value. If the chip doesn't have an address, the game deletes it.

Chip type
