-----Info-1

This FAQ contains all of the packs in DM9EX3, and a cardlist of all 1138 cards. This FAQ has nothing to do with gameplay or strategies. The only thing not related to the cards is how to unlock the packs. Please note that the packs in the game (most of them) are based off the Japanese booster series, and therefore the Japanese names for the packs are used.

-----Frequently Asked Questions-5

Since this is the first published version of the FAQ, there are no actual questions I can answer. However, I can anticipate some and put them here:

Q: Where do I find X card?

A: On this, the first version, use Ctrl+F and type in the name you want, then look what pack it is in. In a later version, you will be able to look in the card list and see what packs it comes in

Q: I can't find X card in the pack you listed it in!

A: All cards listed are those that I have seen with my own eyes. If someone tells me a certain card is there and I have not seen it, I will mark it so. (Although, I will do a mad search to find that card in that pack, and once I do it will be like any other card in the pack, and the contributor will be listed in the credits)

Q: Is there a trick to getting cards?

A: Unless you have an emulator or cheat, no. There are cheat codes to edit what you get in a pack, and on an emulator you can save state (Shift+F1, F2, F3, etc. on VisualBoyAdvance), open the pack, and if it doesn't have what you want, load state (F1, F2, F3, etc.) and try again. To check all the cards that should be in the pack according to the Japanese set, I probably have opened the same pack a few hundred times (using the save state so that I didn't have to duel as many times).

Q: How do I input card codes?

A: You don't. That feature was taken out of the game, presumably so that this game could be used for some big tournament without everyone getting their best cards in a few minutes...

Q: Why do you use the Japanese names?

A: Because I play the the Japanese Yuugiou OCG, and am used to using them. I only put the English names as an afterthought to make more people like the FAQ and to make the cardlist easier for me (since I play using the English text because I cannot read Japanese).

-----Packs-6

The following are the cards in the packs of the game, using the Japanese names for the cards.

Translations from: <http://www.stormpages.com/edhrzic/Yugioh.htm>

English names that differ from the Japanese ones have been listed after a dash (English names according to Duel Monsters 9 Expert 3 English language option). Cards with an asterisk (*) in front of their names mean that this card does not exist in the original Japanese set.

Cards with a plus (+) after their names are cards that I have found in the game, but don't know the Japanese name for. Please email me the Japanese name if you know it! Or at least confirm whether or not it is the same name in Japanese and English.

Labeled sets (6a, 6b, etc.) are the completed sets.

Please email me if you find a card not on these lists in the pack!

Please do not email me if you can't find a card! Unless noted otherwise (or in an unlabeled pack), I personally have seen all cards listed in the specified pack.

-----Card List-7

(Under Construction)

-----Credits-8

"The booster packs only give you rares that you don't have yet. If you have all of the rares from the pack, it won't give you a third of any card until you have two of all of them. This is a change from WWE, so people won't be immediately aware of it. I'm playing on an emulator and it's pretty obvious. When you're down to to the last available rare, it's the only one you can get no matter how many times you reset the state and select the pack. But, once you get it, the next time you open the pack you can find all of the rares offered as possibilities."
