-----  
| 1. Introduction ~ INT1 |  
-----

Umm, hey. I'm known as Mantastorm on these forums.

You may know me from a few boards, including the HM:AWL and SA2:B Chao Board. ^\_^

This is my first FAQ, so go easy on me. Just helping all who are diversified in the world of plants.

Hope it's good.

<\_  
>\_>

Now, let's get going! ;D

-----  
| 2. FAQ History ~ FAQ2 |  
-----

v0.5, 13/10/2004 Basically, a quick runthrough of the basics. More soon! ;)

v0.7, 14/10/2004 v0.5 was rejected, so I added more stuff for 0.7!

v1.2, 15/10/2004 v0.7, reject'd. I've added a crop list and stuff on Tartan.  
v2.1, 18/10/2004 Finally accepted. w00t! I've had some good feedback,  
Upgraded my layout. Second gen trees in. Copyright stuffs in. Quick tabs in.  
Extra rich-quick schemes. So jah, a lot. ^\_^  
v2.9, 05/05/2005 Finally got back into this game! Finished the crops and tree  
section for good, second and third gen crops and all. A few more thanks, and  
added and fixed tid-bits here and there.  
v3.3, 07/05/2005 Apparently, I missed out the most obvious facts there is on  
trees, such as where to lay them >\_<. Added some more quickcodes, sub-contents,  
and a hella-lot of diagrams. Also put in some funfacts. Yaya.

-----  
| 3. Vesta's Farm ~ VSF3 |  
-----

Ah, Vesta's farm. You can buy quite a bit here to start off your plantation.

-----  
SHOP  
-----

(Crops)

Turnip: 20G  
Carrot: 30G  
Strawberry: 30G  
Tomato: 30G  
Sweet Potato: 40G  
Potato: 40G  
Melon: 50G  
Watermelon: 60G

Crops are a one time use, and can only be used in certain seasons.  
They're cheap, and can be upgraded easily.

(Trees)

Peach: 1120G  
Orange: 820G  
Grape: 900G  
Banana: 1500G  
Apple: 820G

Trees are pricey, though once matured, they last forever, and harvest fruit in  
certain seasons. VERY hard to upgrade.

(Misc.)

Fertiliser: 120G

Fertiliser... the upgrading tool. Place enough on one seed and it'll grow a  
grade. Beware though. Do NOT place any more fertiliser on a square until the  
poopy-coloured cones have dissolved completely.

Not only do you waste tons of gold and fertiliser, you  
will be notified by this...groundhog thing,  
telling you not to do it again. (Yes, I have had him.)

It takes around 5 fertilisers to upgrade one rank on a CROP.  
Ten will get you from B to S.

For trees, it takes (I ain't kidding) THIRTY to upgrade a tree rank.  
So 60 fertilisers will get a tree's produce from B to S. This gets much easier  
once you unlock Tartan.

-----  
MANTA'S TIP

Whaddya mean there's no trees?  
-----

I don't know how many people get this wrong.  
Most claim they cannot buy trees as 'they aren't there'.  
On Vesta's menu, press R for the next set of tree  
seeds, then R again for Apple Seed and Fertiliser. >\_<

-----  
MANTA'S TIP

Crop Laying  
-----

See how Vesta lays out her crops? Like:

XOXOXOXO  
OXOXOXOX  
XOXOXOXO

X = Crop  
O = Empty Space

Makes it more manageable. ~\_^

(Any other plant combinations helpful)  
---

The trees seem a little... pricey, don't they? Well stick around and  
I'll tell you everything.

-----  
| 4. Ba-bum... The Basics ~ BAS4 |  
-----

Now you have your precious seeds packed up in wrapping, it's time to...

TEST OUT THE NEW TOY ^\_^

You have your hoe from the tool shed, right? Press A on the soil to  
till it, making it ready for planting.  
Remember, water your crops and trees twice a day. Once your tree is fully grown,  
it won't need watering.

You have three fields. An unfertile field, a fertile field, and a very fertile  
field.

And it isn't just size that matters.

Now remember this:

B = Average Quality  
A = Good Quality  
S = Superb Quality

Yes, I have done research myself. And it is safe to say there is NO C-rank. =P

The unfertile field is where you should be planting your first crops, believe it or not.

Thanks to Lady Morgana for clarifying this.

The unfertile field will only support first generation crops.  
The fertile field will support first and second gen crops.  
The very fertile field will, heck, support all three gens.

No, if you plant your first B-Ranked seeds in the very fertile or fertile field, it will grow just as fast as it would in the non-fertile field.

---

#### 4a. Crop Tips ~ CRP4

---

Most first gen crops take around 5-10 days.

Here's what ya' need to know on the crop seasons  
(When it can survive is in ALL CAPS):

Tomato: SPRING SUMMER FALL winter  
Watermelon: SPRING SUMMER fall winter  
Melon: spring SUMMER FALL winter  
Strawberry: SPRING summer FALL WINTER  
Turnip: spring SUMMER FALL WINTER  
Potato: SPRING summer fall WINTER  
Carrot: spring summer FALL WINTER  
Sweet Potato: spring summer FALL winter

I suggest you stock up on Tomatoes and Watermelons,  
as they last you through the first two seasons.

-----  
MANTA'S TIP

The Turnip Fanclub  
-----

Thanks to arche289 for this helpful info.

One more thing. Turnips, when used correctly, can be extremely versatile:

They are the fastest growing crops in the game,  
The fruit gives Light Pickles for just one of them,  
So enough Light Pickles would unlock more recipe sections,  
That and turnips in general are also great gifts to townspeople,  
And are at the bargain price of 20G!

Reccomended you get these in late Spring. Once summer comes, Go Turnips!

---

Unlike trees, crops can be placed anywhere, as they require less nutrients to grow.

Regarding O is spaces, C is crops.

00000  
OCCCC  
00000

It's allowed. The following is also allowed, but would be very cumbersome.

00000  
OCCCC  
OCXCO  
OCCCC  
00000

They'd all live, but chances are, Crop X would be very hard to get to, as you'd have to wait for the other crops to clear, and eventually, crop X would die because it never got watered, for the reason you couldn't reach it in time.

This is why I reccomended Vesta's checkerboard pattern said in Crop Laying.

Now, trees, trees, trees...

---

---

#### 4b. Tree Tips ~ TRE4

---

Pricey, but worth it. Trees take around 20-30 days or so to mature. Then they will give fruit in certain seasons. (Only once mature.)

For where you should place the trees, I would place them in the very fertile field, regardless of gen. This is because of the following:

Trees can ONLY be placed in a field where there is 8 spaces clear around it.

So the following is okay, regarding X is trees, O is spaces.

00000000  
0000X000  
0X000000  
000000X0  
00000000

Also, no worries about having two trees sharing the same empty space, it's okay.

0000000  
0X0X0X0  
0000000

The above is allowed, even if they share the same empty space. It's just having an empty space all around which matters.

Now, the following is NOT allowed. Let's just say 1, 2, and 3 are trees.

000000  
012030  
000000

Tree 3 is okay, because there's an empty space all around. Trees 1 and 2 will die, as they do not have empty spaces all round, and die on the concept on being too close together.

Same with diagonals, and vertically. There must be an empty space one space all around, or your tree won't live.

If a tree is on the side, no worries. It'll still live.

Imagine X as a tree, O as an empty space, and | as the side of the field.

```
0000|
000X|
0000|
```

As outside of the field there's grass, your tree will still live on the sides, and even in the corners, without any currently foreseeable growing hinderance.

Like before, ALL CAPS is when they will give the goods. No, no (first gen) tree will give fruit in Spring/Winter.

```
Peach: SUMMER fall
Orange: SUMMER fall
Grape: summer FALL
Banana: SUMMER fall
Apple: summer FALL
```

Trees, in their harvest, normally give around 24 fruit. ^\_^

---

By the way, if I've lost you already on 'Tartan' and 'gens', hop on over to the Tartan section, accessible by finding the respective quickcode in the index, found by the code IDX0.

```
-----
| 5. Hail to the Seed Maker ~ SDM5 |
-----
```

The seed maker can be gotten in two ways:

1. Get it from Daryl.
2. Get it from the ledger for 6000G.

For the second one, it'll pop on the shelves around late Ch1/early Ch2.

But for the first one...

You need to befriend Daryl, the scientist, to get this machine for free. What you should do is give him fish every day. Good way to waste Colombo. ^\_^

This'll start a string of events, if you enter Daryl's around lunchtime. He is planning on some sort of hair-brained scheme... Stay please.

Do this enough times and you will get the Seed Maker cutscene...

Daryl should be mumbling about how Town stole his inventions. Hear him out, and after much talking, he will give you the Seed Maker.

```
HOW TO USE
-----
```

The Seed Maker is the machine thingamajig on the side of the Tool Shed.

The first thing you will notice is 16 orange squares when you use it.  
Place your FRUIT here. (And veg), basically, you can't put in seeds.

Wait a few days, and two seeds will take it's place. ;D

---

-----  
MANTA'S GET RICH QUIK SCHEME!  
The Infamous Banana Cheat  
-----

Ingredients/Requirements  
-----

Seed Maker

Matured Banana Tree (or any other tree, but Banana functions best)  
It must be Summer.  
Van's shop must be open.

-----

The Seed Maker is the very thing that gave  
rise to the banana "cheat".

What you do is mature a banana tree (for best results), and wait until summer.  
The tree will give around 24 fruits, as usual.

Now, place all the fruits in the Seed Maker, wait a few days, and 48 seeds  
will take it's place.

Next sell all these to Van.

As one banana seed costs 1500G and you sell for half,

$750 \times 48 =$  Up to 36000G.

Cool, 'eh?

---

-----  
MANTA'S GET RICH QUIK SCHEME!  
S-Ranked Army: Non-Tartanic Version  
-----

Ingredients/Requirements  
-----

Seed Maker

An expensive/quick growing crop (preferrably both)  
Ten fertilisers

-----

What we do here, is first upgrade your chosen crop to S-Rank with  
your fertilisers. Yes, the way I said so.

Place the S-Ranked Crop in the Seed Maker. That's two seeds. Plant them.

Put them in the Seed Maker, you now have four seeds.

Keep going and you'll literally have an army.

Sell these, or give as presents. (Galen/Marlin like only S-Rank stuffs)

Or, basically whatever you'd do with a fruit. 0\_o

---

These cheats are also good for making rows and rows of seeds. ^\_^

-----  
| 6. T-T-T-T-TARTAN???? ~ TRT6 |  
-----

Tartan, the two-headed talking plant, lives in Takakura's house.  
Yes. This is the thing you need to use to hybrid.

HOW TO GET TARTAN  
-----

For this strange looking plant, enter Takakura's house past Chapter 2.  
There is a small chance you may find Tartan.

After a not-so-brief cutscene, Tartan moves into the house.

Don't think you can hybrid straightaway, mind...

He's pretty lonely all couped up in Tak's house, so talk to him. ~\_^

You need to talk to him pretty much a lot.

He sometimes talks about certain hybrid combos, Ruby, what Tak  
gets upto on Saturday nights... 0\_o

After a LOT of talking, you can select the 'Hybrid' option.

A full hybrid list is at the bottom of the FAQ.

HYBRIDIFIED  
-----

Heh, cool title, 'eh?

For hybrid, you must feed Tartan two plants.

Seed + Seed = Seed

Fruit + Fruit = Fruit

Seed + Fruit = Seed (I think)

Unfortunately, there are no hybrids for tree + crop. U\_U

There is no 100% chance a correct formula will result in hybrids either.

For best chances, do it on a lucky day on the horoscope ^\_^

You can hybrid hybrid plants too. This makes THIRD GEN HYBRIDS.

They have no name, so you can name them yourself.

There's only four spaces though. >\_< Ah well.

Besides Plants + Plants, Tartan can hybrid Plants + Certain Flowers.

Ever noticed why some flowers have more than just the description?

That is because of this:

Plant + Happy Lamp = Plant that can grow in all seasons.

Plant + Gemsoil = Plant that can grow in any field.

Plant + Upseed = Plant that is automatically S-ranked.

Happy Lamp: Pretty common. Summer. On the hill and by the swamp.

Gemsoil: Quite rare. Fall. By the waterfall, at the dig site.

Upseed: Extremely rare. Winter. I have only found one place where upseeds grow, and that's by Cody's trailer, by the wall.

According to arche289, Upseeds sometimes grow on the side of the pathway going to the Dig Site. I have yet to confirm this.

The flowers only work with crops. Not trees, I'm afraid.

Though a glitch has been submitted to make upseeds work on trees...

Thanks to Jaredn11.

```
-----  
<< GLITCHY...  
UPSEEDED TREES  
-----
```

Easy Tree Upgrade to S Rank

Note: You must have Tartan for this glitch to work.

Normally, you aren't supposed to be able to mix crops or flowers with trees to get a different result, but in this case you can.

Step 1: Take any crop in seed form and upgrade it to S rank with the UP-Seed. (You have to have Tartan to make hybrids)

Step 2: Take desired B-Rank tree you wish to make S-Rank and place it in the first slot of Tartan.

Step 3: Take the S-Rank crop and place it in the second slot.

Step 4: MAKE SURE THAT THE B-RANK TREE IS IN THE FIRST SLOT AND S-RANK CROP IS IN THE SECOND IN ORDER FOR THE GLITCH TO WORK

Step 5: Use Tartan and there you go, an S-Rank tree without wasting thousands on fertilizer.

Once again, thanks to Arche289, we have another get rich quik scheme!

```
-----  
MANTA'S GET RICH QUIK SCHEME!  
S-Rank Army: Tartanic Version  
-----
```

Ingredients/Requirements

```
-----
```

Tartan

Seed Maker

Upseed

An expensive/quick growing crop (preferrably both)

What we do here, is first hybrid your chosen crop to S-Rank with that

Upseed you've been saving.

Place the S-Ranked crop in the Seed Maker. That's two seeds. Plant them.  
Put them in the Seed Maker, you now have four seeds.

Keep going and you'll literally have an army.  
Sell these, or give as presents. (Galen/Marlin like only S-Rank stuffs)

Or, basically whatever you'd do with a fruit. 0\_o

^\_^

---

-----  
| 7. CROP MAP ~ CRL7 |  
-----

Key:

Name: Well, the name of whatever you're growing.  
Gen: Normal, hybrid, or a hybrid of hybrids?  
Type: Crop? Or Tree?  
Time: How long it takes to grow.  
Seasons: When it WILL grow.  
B/A/S Fruit: How much you can sell your fruits for.  
B/A/S Seed: How much you can sell your seeds for.  
Obtainable: How do you get it?  
Description: What does it look like?

A Seed: 860G

S Seed: 870G

Obtainable: 5 Combinations:

Appage + Lanmuge

Gehju + Oraphu

Magenge + Phurum

Magerum + Oraphu

Magerum + Phurum

Description: A confusing one. I'll just go for an underripe coconut.  
It's green, has brown streaks, and it's the closest one in my head.

Name: Hybrid Tree #07

Gen: Third

Type: Tree

Time: 30-35 days

Harvest: Fall

B Fruit: 100G

A Fruit: 110G

S Fruit: 120G

B Seed: 960G

A Seed: 970G

S Seed: 980G

Obtainable: 4 Combinations:

Gehju + Jurum

Gehju + Orahge

Gehju + Phurum

Jurum + Orahge

Description: A yellow apple. Easily the simplest HT to describe of the lot.

Name: Hybrid Tree #08

Gen: Third

Type: Tree

Time: 35-40 days

Harvest: Winter

B Fruit: 100G

A Fruit: 110G

S Fruit: 120G

B Seed: 950G

A Seed: 960G

S Seed: 970G

Obtainable: 3 Combinations:

Appage + Magenge

Appage + Oraphu

Magenge + Oraphu

Description: I asked my parents on this. It's called a persimmon, apparently. Kinda like a flat orange with a dark yellow leaf on top.

Name: Hybrid Tree #09

Gen: Third

Type: Tree

Time: 35-40 days

Harvest: Winter

B Fruit: 100G

A Fruit: 110G

S Fruit: 120G

B Seed: 950G

A Seed: 960G

S Seed: 970G

Obtainable: 2 Combinations:

Jurum + Phurum

Jurum + Phuju

Description: A purple/violet fruit called a fig.

| 9. FUN FACTS ~ FNF9 |  
-----

- The crop with the highest amount of combinations is HC20, with 17 combos.
- Turnips sell for the least with 25-45G a crop, and 10-30G a seed.
- HT04 sells for the most seedwise for 1400-1420G a seed.
- If you're wondering why we don't use HT04 for the Banana Cheat, you obviously

don't know how hard it is to get a third gen tree, then get it harvested.

- HC08 sells for the most cropwise, with 1000-1020G a crop. It seems irrigation systems are the new high in cool.
- Someone set us up the HC05.
- A recipe booklet for the plants is in my mind for this FAQ's future.
- I didn't add where to place trees until v3.3 of this FAQ. Odd, since I added everything else before 3.3.
- I'm 13 years old, will be 14 on the eighteenth of November.
- 95% of this FAQ was written between the hours of 11pm-1am. I am teh sleepy.

-----

I'd like to thank:

Me - 7\_7 Obviously...

jaredn11 - The cheat? Put in FAQ. Cheers. ^\_^

arche289 - For helping, providing much-needed feedback, and entering 'The Turnip Fanclub' tip.

Lady Morgana - Clarifying what crop goes in which field from ranks to gens.

My dad - Being a fruit-freak himself, he helped loads on identifying the hybrid trees. \*eats persimmon\*

awl.fogu.org - Helped IMMENSELY on the hybrids and list section.

hmotaku.net - Helped on everything else, filled in the blanks on HC23 and 24.

The GameFAQs AWL and Diamond Jack Message Board - For supporting me.

Natsume, Marvelous Interactive and Ubisoft - For making AWL possible.

And many... many... more... ;D

See a typo? Mis-information? Fill in the blanks? Feedback?

New information for my FAQ? Hell, giving info on crop types help.

I suck in that field. >\_>

Email me at [elimabob@hotmail.com](mailto:elimabob@hotmail.com), or my new email adress, [mantastorm@gmail.com](mailto:mantastorm@gmail.com)

Any help will be posted above in this FAQ! Thanks!

Thanks, and hope you enjoyed this FAQ! Cya! ^\_^
