Frequently Asked Questions:

1. What is the point of the game during the credits?

As far as I can tell there isn't one, other than to provide some form of mild entertainment to get you to actually **watch** the credits. This is similar to movies putting in out-takes and "hidden scenes." Of course, the most important thing about the game is to get a new Monkey Level and submit it! :)

2. How do I skip the end credits game?

I'm not quite sure how to do it in this one... haven't tried, too busy trying to get scores!

3. How are you getting so many bananas?

This one isn't quite as difficult as the first one, avoid letters, get stars and big bananas. You get a 100 point bonus if you get all the stars, a 100 point bonus for getting all the big bananas too!

4. How are you getting so few bananas?

Avoid the stars at all costs! When you have a star the letters don't take away points!

This is a VERY rough list... please submit as many as you can... the Monkey Levels appear to have the same names as the original, just with different point values.

Your Monkey Level is:

 1080 to 1109: Japanese Macaque
 1110 to 1139: Black Ape
 1140 to 1169: Yellow Baboon <-- (scores of 1053 and 1054 have been posted for
 1170 to 1199: Hamadryas yellow baboon, but this TOTALLY bucks the
 1200 to 1229: Mandrill trend of 30 points per level... but a lot of
 1230 to 1259: Gelada Gibbon this is guess work, so maybe I'm totally off
 1260 to 1289: White Handed Gibbon I'll confirm this ASAP)
 1290 to 1319: Capped Gibbon
 1320 to 1363: Moloch Gibbon (At this point the monkey ranks seem to get
 1367 to 1373: Siamang Gibbon bigger...)
 1388 to 1404: Orangutan
 1412: Chimpanzee
 Gorilla?
 Bonobo?

This list is in VERY beta form... a lot of this is guess work, I would like confirmations on basically every level here, especially the very high end and very low end of the list, it appears as if the ranks are 30 points a piece up until the end, and the low scores, well... I'd like to say that they go by 60's but that leaves out Indris or Avahi. Perhaps the list of Monkey Levels doesn't completely mirror that of the first game?

In any case, if you can confirm or deny and levels or you think i should add something to the FAQ please contact me, include a name you would like to be credited by (especially if you don't have a name attached to your email) or I'll use whatever comes before the @ in your email address.

Thanks!
