| 4.  WELCOME |=========================================================================
+==============+
```

Welcome to my in-depth FAQ for Liberty or Death. This is not, however, a FAQ
or strategy guide for the game. It is instead a data/hex dump of the program.
What this means is that the data or information that was on the cartridge was
dumped into a more useable form. There are several purposes or reasons for a
hex dump. The big reason is that if you are playing a game and you don't think
you have gotten everything, you can dump a programs contents to see all of the
different items or objects that exist. This is especially helpful with the
"rumored" objects or the very rare objects that may occur in a game. Another
reason for a dump is if you are writing a FAQ for a game. Granted you may have
played the game many times over, but you want to make sure the information is
correct; this is the way to confirm your information.

I will attempt to make this guide as user friendly as possible. I will explain
each section and chapter as they occur for what data you are looking at. I
will also explain some of the more interesting things that I found after I did
the dump. Again, this is not a strategy guide. It is instead to be used as a
resource to enhance your game playing experience. Since there are no spoilers
in the game, most things that appear in this guide should not be a surprise as
you go through the game.

If you wish to e-mail me your thoughts on this FAQ, better ways of doing
things, other strategies, etc., feel free. Make sure you put LOD FAQ in the
subject. If you don't, I'm liable to discard the e-mail as spam.

| 5.  OVERVIEW |=========================================================================
+==============+
```

Liberty or Death is a game that takes place during the Revolutionary War. You
can play the Americans who are struggling against the tyranny to break away
from "Mother England or you can play the British whose purpose is to crush the
rebellious upstarts in America. Either way you go, you will have a long road
ahead of you. You will have command of a couple of hundred military leaders,
resources to supply those leaders and troops, and also have to deal with the
headaches of managing your districts. This game is not a linear start to
finish game. You get to make the decisions of when and where to attack,
resources needed to attack or defend, and resources necessary to manage your
districts efficiently. If you are playing the Americans and make a good stand
against the British, the French and Spanish may come and help you out. To
achieve victory, as either the Americans or British, you must successfully take
all 53 districts to win the game. You must be familiar with strategy and
tactics in order to achieve this victory. Good luck.

These files seem to indicate what music is played during the game and also what
the different personalities in the game look like. It appears there is a way
to edit the commanders but I haven't figured out how to do it yet. Anywhere
you see a % sign followed by a letter means that letter is some type of

variable. Whether that variable is from existing data or data you have to
input.

You are allowed to save two games on the Liberty or Death cartridge. The data
is saved in the volatile RAM and it is maintained by a lithium battery.
Obviously, if your battery goes, you won't be able to save data once the game
machine is turned off. These are the operations that the game goes through to
load or save a file. Again the % sign followed by a letter means a variable.

This is the heart of the program. The game data is what is displayed when you
see the screen. The game data is used for support. This basically means that
anywhere you see the % sign, means that the following types of data will
probably be that variable. This allows great flexibility in this program

instead of "hardcoding" every little thing which would cause the program to
grow exponentially.

I've played this game many times but I have often wondered about what things
one would see. After doing this data dump, I realized I had seen most of the
messages and other data. Although there are 250 officers in this game, I know
that even when both sides were at their peak, that many weren't available at
that time. It was fun doing this data dump and I may do it to a few other
games I have since there are things in these games that are truly interesting
and fun.
