o=====o  
| Introduction [1000] |  
o=====o

Many of you have probably grieved over the fact that the game doesn't show us how much HP enemy bosses have. Most sites on the internet only give vague information, but no solid data. I decided to find out the truth myself.

To find out where the game stores data for each enemy HP, I used a program called cwheat. Compared to other games, it was a hard and gruelling task. Why, you might ask? The answer isn't so simple either.

Most games store Hit Points data in a constant memory address. But, Patapon uses variable address for each unit's HP. This address changes according to many factors, which makes it difficult to pinpoint during gameplay.

By doing some research, I've come to some conclusions.

The adress for a boss' HP relies on:

- Current number of Patapons in party (1-18, excluding Hatapon)
- Types of units in party (Yumipons, Yaripons, Tatepons etc.)
- Class of each Patapon (White Patapon, Rarepon, Ultra Rarepon)
- Miracle and Stew selection

The adress for a boss's HP does *\*not\** rely on:

- Each Patapon's equipment
- Formation of Patapon

Also, it is important to keep in mind that each address may change during battle as well. Some confirmed factors are: losing HP, dying, teething, making a boss retreat or drop an item, etc.

```

O=====O
|           Mathematical formulas [2000]           |
O=====O

```

First thing you need to know - each boss gets progressively stronger every time you beat him. As he gets stronger, he also gets more HP.

By defeating a boss, his Level will rise by one, up to a maximum of 100. When a boss gets to Level 100, his level will be displayed with a Star symbol. A Star-Level boss won't get any stronger no matter how many times you beat him.

Now, let's start talking about more interesting stuff. Each time you defeat a boss, his HP will go up by a fixed value. This value is different for each of the 11 bosses. Below is a simple table, where you can find:

- 1) Each boss' HP at Level 1
- 2) HP increase for each Level-Up.

| Boss        | HP at Level 1 | HP increase per Level |
|-------------|---------------|-----------------------|
| Dodonga     | 3500          | + 3500                |
| Majidonga   | 4000          | + 4000                |
| Zaknel      | 4500          | + 2250                |
| Dokaknel    | 6000          | + 3000                |
| Gaeen       | 5500          | + 2200                |
| Dogaean     | 7000          | + 2800                |
| Ciokina     | 5500          | + 1650                |
| Cioking     | 8000          | + 2400                |
| Shookle     | 10000         | + 5000                |
| Shooshookle | 20000         | + 10000               |
| Gorl        | 30000         | + 3000                |

With this information, we can easily calculate a boss' HP at any level. Let's add some variables:

- A = HP at Level X
- B = HP at Level 1
- C = HP increase per Level
- X = Level of a Boss

$$|**** \qquad [A] = [B] + [C] * [X-1] \qquad ****|$$

'-----'

This simple equation can be used to calculate any boss' HP at any level.

○=====○  
 | Health Point Tables [3000] |  
 ○=====○

Below I've listed the HP values for all major bosses in Patapon.

Please note that HP values can be smaller or bigger by 1.

Don't ask why, cause I have no freaking idea.

| Lvl | Dodonga | Majidonga | Zaknel | Dokaknel | Gaeen | Dogaeen |
|-----|---------|-----------|--------|----------|-------|---------|
| 1   | 3500    | 4000      | 4500   | 6000     | 5500  | 7000    |
| 2   | 7000    | 8000      | 6750   | 9000     | 7700  | 9800    |
| 3   | 10500   | 12000     | 9000   | 12000    | 9900  | 12600   |
| 4   | 14000   | 16000     | 11250  | 15000    | 12100 | 15400   |
| 5   | 17500   | 20000     | 13500  | 18000    | 14300 | 18200   |
| 6   | 21000   | 24000     | 15750  | 21000    | 16500 | 21000   |
| 7   | 24500   | 28000     | 18000  | 24000    | 18700 | 23800   |
| 8   | 28000   | 32000     | 20250  | 27000    | 20900 | 26600   |

=====O  
| How to manipulate HP [4000] |  
O=====O

If you're using cwcheat and want to manipulate Boss' HP to make them stronger or weaker, please read the following notes:

- a) You must use an European copy of the game (ULES-00995)
- b) You must use the codes shown at the end of this paragraph
- c) You must have access to miracles and stews
- d) Your party must consist of 6 Yumipons, 6 Yaripons, 6 Tatepons
- e) All of your units must be Mogyoons (created by using Lvl 3 + LVL 4 material)
- f) You must use Storm miracle
- g) You can't use any stew

When you meet those criteria, the cheats are guaranteed to work properly.  
If you don't, memory address for Boss HP will change and the codes won't work.

Here are the addresses for each Boss' HP. Please note that their values are preset to 0, which will kill the Boss instantly. If you want a different value, simply change it yourself.
