I. Translation Notes

There are a couple attack translations I'm not completely sure of: Mystic's Rue, Kyoto Flower Kick, and One Finger Wave.

In addition, Bacchin Press and Bash of Shokkaku are only half translated, as you might have noticed from their names.

Also, just to make it clear that I'm not nuts, when you see Freeza's "Spirit Bomb Wave" (Ki Baku Ha) move, rest assured it is properly translated. "Genki Dama," which was renamed "Spirit Bomb" in the US version of the anime, actually translates to "Health Ball."

~~~~~  
II. Basic Controls

COMMON ATTACKS: Square makes a character punch, X makes him kick, and Circle makes him fire a Light Bullet.

SPIRIT CHARGING: Holding Square, X, or Circle down will make a character charge his Spirit Meter.

BACKWARD/FORWARD + SQUARE: This makes a character throw his opponent, if he is close enough to the opponent.

COMMAND TECHNIQUES: Every character has several special techniques that are listed in the next section's move lists.

DASH: Pressing and holding L1 or R1 makes a character dash left or right, respectively.

JUMP: Pressing up on the directional pad will make a character jump.

SKY DANCE ART: Pressing Triangle will make a character fly, or land if he is already flying.

BACK STEP: Tapping Backward twice quickly makes a character do a short dash away from the opponent.

BASIC GUARD: Holding Backward on the directional pad when attacked will make a character do a basic guard.

LIGHT BULLET DISPERSING: Pressing Square + X will make a character do a short attack which will nullify non-unblockable Spirit attacks that are hit with it.

BARRIER: Pressing Down, Down-Backward, Backward + Circle (and holding Circle down) will make a character put up barrier that drains his Spirit Meter, but will nullify any Spirit attack, even if it is normally unblockable.

~~~~~  
III. Move Lists

[Jump] means that your character must be jumping when you execute the attack.

[Anywhere] means that the attack can be executed while standing/floating and jumping.

[Hold] means that you must hold the directional pad in the specified direction for at least 2 seconds before proceeding with the rest of the attack.

[Throw] means your character must be in throwing range of your opponent's character when the attack is executed.

[Unblockable] means the attack is unblockable, except for by a barrier.

~~~~~  
IV. The Secret Characters

At the title screen, press Up, Triangle, Down, X, Left, L1, Right, and finally R1. You will hear a chime, and a short animated movie will play. You'll then notice the title screen has changed to Dragon Ball Z Ultimate Battle 27. Now, Young Son Goku, Turtle Hermit (Kame Sennin), Mister Satan, Super Saiya-jin 3

Son Goku, and Gogeta are all playable in any mode.

For move lists for these secret characters, I would recommend Louis Kwong's Ultimate Battle 22 FAQ, which you can probably find on the same site you found this FAQ.
