I used to admire fighting games with anime cut-scenes, but the only game I ever liked that was like that was Evil Zone. It is fortunate that Titus Software brought this game to the US before they closed its doors 5 years later. Well, since the US release had lot of changes, they are mostly the voices replaced with English voice actors. The voice actors had various lines for various categories. It is not just in the fight, but also in the option settings and voice player. I come across that the Memory Card quotes were really entertaining. Well, enjoy this for your own entertainment.
