T260G Walkthrough - By: Sean Karunaratne (SeanFF7007@aol.com)

T260G is a robot with a lost mission and is going around gathering scrap, data and most importantly completing his mission. Now Mecs are interesting, the better the weapon you equip them with, the higher HP will rise, it's good to equip Mecs with a nice piece of armor and a ton of Rifles, Bazooka's and Cannons, observe that stats when equipping

WARNING!!! Save all Sanctuary Stones, never use them unless I say, there will be times you'll desperately need them, so only use them if this guide says so!! If it's an awful situation and using one is a MUST then drop one.

Junk, Port and Combat Arena

T260G wakes up. There's a long talk between Rose, Thyme and Taco. Now you name T260G and go find some scrap parts. Good luck!! First off, stop by the Port and gather some information on T260G, then head to the Combat Arena, go into the rightmost room which is the Junk Bar. There you talk to a drunkard name Gen. Now your off, head to the next room left from the bar and talk to the slime. Your first battle. He's pretty easy, pop a shot off with the Junk Bazooka and exchange punches, now head back to Junk with your new part and have Taco fix it up, before you go back to the Arena stop by the house above Taco's and buy 3 Repair Kits. Now go to the slime, pick up your money and go through another fight. Before talking to the slime equip your new weapon. Now this fight is not much harder, although the enemy can push you back making your attacks considerably weaker. Junk Bazooka and some punches, now head back to junk, have your new part fixed up and equip it. Now get your money and head to your next fight. This ones tougher but with the right supplies it shouldn't be too much harder. Junk Bazooka and punches, if he takes to much out of you get out one of your repair kits. Now with your Broken Rifle go to Taco's and get an Easy Rifle, equip it and buy 2 more Repair Kits. Now head back to the arena. OH NO, ROSE HAS COUGHT YOU!!!!!! Rose drags poor Thyme back to Junk, but then the machine that's talked so nasty to you attacks!!!

Boss Fight: Vulcan

This fight isn't too tough, hit him with your Junk Bazooka and trade hits, use your Easy Rifle of course, without your three new items this fight would probably be impossible.

T260G wakes up. Now head back to the Arena, go to where Gen is. Talk to him and then Rose will bust in saying that Thyme has been kidnapped! Run back to Junk, visit each house and some people will hand over some items, now go to the shop and buy some cures and repair kits. Now head over to the crater. This is a Cabellero factory, you probably heard people talking bad about him before, nows your time to rescue Thyme. You know this place is it because Thymes hat lies right in front of an elevator. The path is pretty straight forward. When you get into an area by a swamp go to the upper cave, grab the treasure and come back down into the swamp, get in the elevator, go to the

next elevator. Then there are two paths. When that leads up to land and another elevator, go down the elevator, YOU MUST GO DOWN!!!! There will be a Sanctuary Stone lying there, now get back out and go up the path to land. Go in the cave and you see Thyme!! But he's being harrassed by Caballero men, so getting him wont be so easy!!!!

Boss Fight: Sir Demon, Xeno and Skeleton

First things first, take out the Xeno and Skeleton. Don't waste WP and your Junk Bazooka, just hit 'em with Iron Pipe and Easy Rifle attacks, once they're down use the Junk Bazooka and Hard Slash, this should bring Sir Demon down quite easily!!

With Thyme rescued there's nothing left to do in junk, T260G bids his friends a farewell and flies to Scrap!

Scrap

First thing you gotta do in Scrap is go to the Pub, now head over to the man in the business suit, he'll tell you to visit him in Shrike, now go to the odd looking creature above the man, it's Riki!! He and Mei-ling will then join your party. Now head right and talk to some singing queer! He WON'T join your party. Now head down to the Office. Then go to the factory.

Factory

First things first, head to the two outer buildings and pick up the treasure, when your done head to the right and fight your attackers, then that queer will join your party. Now head into the main factory. You can see this little glove thing hanging around by a blue monitor, press that button and you see a sniper take the dust!!! Now head to the right of that switch and you'll see three others. Go to the first one, the Sniper takes it!!! Go to the one below and flip it, a box is lifted and another switch is revealed, now head down stairs and go inside the gate. Go where that switch revealed itself, this isn't gonna be so easy!! You have to get it RIGHT on the sniper, or else your fought, now head up and go talk to the man in the doorway (don't bother taking out that pig). Make sure you have a MagicStone equipped! FIGHT!!!

Boss Fight: Vulcan and D-Tractors

This fight will be simple. First take your MagicStone and hit all enemies, now target Vulcan, two attacks and he's toast, SIMPLE!!!!

T260G's Story really starts to take off here! First of all I want to point out one thing, BUILD UP!!!!!! T260G's Final Boss is a real pest and your not gonna get past him without a real hard try if you don't build up!! I suggest for T260G's quest the best place is the Bio Research Lab. Try getting DSC. You can do magic quests, I don't suggest doing them but I do suggest to tell the guy your gonna do them so you can get Emelia. She learns DSC quite well, just bring her to the Bio Research Lab. Now before I go on you must get Sliding, Suplex, Babel Crumble and Giant Swing for DSC. Other people include Gen. My suggested party is Mei-ling, T260G, Any Mec (put Leonard Mec their permenantly once you get him), Gen and Emelia. Mei-ling using Light Magic and Sword Skills, Gen using Sword Skills, Emelia using her fists, Mecs doing technical stuff. Now go to the Bio Research Lab and build up. You should get

DSC in no time, keep trying for advanced Sword Skills like RosarioImpale and LifeSprinkler, this all doesn't have to take place no, but at least build up before doing anything else.

Koorong

Not much to do here, go to the bottom level and there is a secret building behind a chicken, go to the far right door and talk to a computer, you'll gain some info for T260G's quest.

Manhattan

In Manhattan stop by that useless food court and talk to the man at the top. He'll take you to Dr. Leonards office, Leonard runs some scans on T260G to find more about his mission and the unique model he is (if you go to Shrike and change into a different model before Manhattan Leonard wont talk to you, he appreciates T260G's form. To reverse that simply change back into the regular model).

Shrike

Finally, there's something to do, stop by Nakajima Robotics, the man from Scrap Nakajima remembers you!!! His Co-Workers, though, are arguing about how to retrieve a mouse lost in Sei's Tomb, hey, why doesn't T260G take care of it, yup, your off to Sei's Tomb!! Now there's two things you can do here, one is optional, but useful. First off, you might wanna get all the items, in that case go to the main room (with the skeletons guarding a sparkly thing) take the bottom right door, travel to right, and up, then travel up and inspect all the artifacts, you should get attacked. The fights not that hard, just eliminate both dead knights and return to the main room, you'll see parts of the floor lighting up. Go to the far left one in the corner of the staircase you came in and step on it, now walk down from the wall and inspect the artifact, beat the Dead Knights and then hop off, you'll see the mouse!! Go grab it!! Now proceed back to the main room and finally get that sparkly thing. Now you have another choice, will you go back to Nakajima Robotics with these three items, or will you place them upon the alter, well, I recommend not, cause there isn't much you get from putting them on the alter. You can get a cruddy sword that costs 3 WP to use, from which you can buy a sword with almost the same attack power and doesn't cost precious WP to use! The items you have are also some great items. The Magatama let's you use SacredSong, the Mizukagami is one of the better shields and is waterproof and heatproof. But if you wanna fight the boss, it's up to you! Now proceed back to Nakajima Robotics. You can now change forms, I personally recommend Type 4 because of the convenient repair pack, but Type 5 has hard defense and medicore weapons, Type 2 is also a good one because it has very strong weapons, Type 6 is a no no, if you want something like that go pick up Engineer Car by the staircase, but don't choose Type 6 because he sucks, he just plain sucks, as for Type 1, that sucks too, Type 3 is average, but you'll get a Mec just like that anyway too. Type 7 also is a good one, it's got strong weapons. Yet it's unique is kinda, well, stupid! Now for getting that mouse Nakajima hands over ZEKE, a pretty good Mec! Put him in your party where your previous Mec was.

Shingrow

When in Shingrow head for the Upper Left Ruin, it should look like a jungle,

climb up a log and you find yourself in a crashed ship, proceed down to a room with a bat, avoid that fight cause those bats can easily destroy you. Now go through the door to the left and go up the ramp, climb the ladder, and go up. Now you'll find yourself at a place where there is a huge board walk, go left of the pillar and try to find a way up, there is a single wall where there's a thick green wall, press O to it and go inside, this is the mysterious life force T260G has detected, scan through every section of the computer until it says "Download" and download a program. All are equally as good and depending how your using T260G pick that program. Now get out and feel free to explore the ship, when your done go to Shrike, sleep, go to Nakajima Robotics. One of the co-workers said that Dr. Leonard has been killed during an explosion, a possible assisination. But don't go to Manhattan, go to the Bio Research Lab, build up to 500's and get DSC, now proceed to Manhattans Central Gate. Then go explore the walls in Dr. Leonards lab, and a Mec comes up. Dr. Leonard has stored his memory in it!! Put Leonard in your core party and proceed to Tartaros.

Tartaros

First thing to do is to go into Tartaros, there are mainly Mecs in here so get some good data! Now go the left and into a room, fromt this room go down a set of stairs that is off to the left and go up, there's a door at the side, go through and there is a door in this room. Go to something that looks like a door, nothing happens, now go back to the main room and try to go through the malfunctioning door, it opens, head straight and now your in a Mine Type place, take the left door. Now you must locate four switches.

Boss Fight: Big Diggers

There is a Big Digger in 4 rooms. Each one drops a special item like the HyperionBazooka!! They are avoidable, but fight at least one so you can get the HyperionBazooka, keep fighting them until you get the HyperionBazooka then I recommend you start avoiding them. If you have DSC the fights pretty easy, but if you don't your gonna end up in a slugfest. Just keep exchanging hits and when the Big Digger topples, keep your HP up because he's gonna do something BIG!! Usually it's just a rocket, and if they hit a Mec with Evasion Rocket then his turns wasted!!

Now locate all four switches, they are scattered through out the mine, you'll know `em when you see a Hermes type monster in a room (which is a Big Digger), there is one that isn't marked by a Hermes, go to the toppled train car and go down then go down that path and hit the switch, with all four switches go to the entrance to the mine and take the right door, there's a big digger avoid this, go to the switch, hit it and then go to the elevator, take it up, and you've found the computer, T260G asks about RB3 but it hints to HQ instead.

Now you can either proceed to HQ or build up at Bio Research Lab, I suggest going to the Bio Research Lab, getting some nice skills.

HQ

First in HQ you'll end up in a huge metallic room, there are side rooms with treasure and two monsters, although you can skip them for now and come back later when the monsters don't attack you, I suggest you fight them cause you can extract valuable data from them. Now from the starting point stick right

until you come to a room that has a big pillar at the middle, now head up and left. You enter a room with a computer and a dormant mec, don't get it right now, the mec, but make a mental note. Now take the ladder down to the door, then go up the stairs and take the right, there's a computer, but a virus has infected it you'll have to go to a virtual town and destroy the virus. Now head up from the virtual town explore the house and you'll be transported by appliances, so look for them, soon you should be at a street with 4 houses. Destroy the Virus' here and head right, destroy the virus' there and head into the castle. Now you'll be taken into a boss fight from here, but if you want to go across the streets and level up on the virus' that's recommended, but beware, Virus' can drain LP so they could kill a character.

Boss Fight: HQ Core and Virus'

There's a barrier of Virus' guarding that Heart thingy, you'll take note T260G has an ability called contact, well use that when you can reach the Heart Thingy with T260G and have him use Contact, first thing, have Mei-ling use Mega Windblast to take out some of the Virus' GaleSlash and 2GaleSlash work well too. Once the path is clear to the Core use Contact. You win!!!

Now with HQ restored head to the starting area, now there is a bridge, take that and go into the chapel, your first thing to do is to light up these lights without going over two. Just make a backwards S. Now your goal is too make all these lights green, the first part is simple, the second isn't, you just have to run around pressing the O button until a doorway is lit up so you can go. Now you have information on RB3. On your way out of this area, pick up all the treasure you left and climb down a ladder where you see a weird looking mec (it's right outside the room that leads you to the computer). Change into the Body, it's a new Mec body!! Keep this one. V-Max is really good, it lets you use CosmicRave and StarlightShower Leonard gives you the option of going to him, NOT YET!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! You can only access him through Manhattans Port. Go to Bio Research Lab, get 770+ HP 900+ HP for your Mecs, lots of skills, DSC for Emelia, RisingNova for Gen and LifeSprinkler for Mei-ling, now go to the man in Koorong by the Gold Seller and grab 30 Max Cures and go to Nelson and buy 2 Zero Swords, buying this many things takes a bit of money, but you should have gotten at least 7500 in Bio Research Lab, now take that money, go to Nelson find the man in the work hat, buy at least 15 Gold Ingots go back to Koorong, sell off enough gold so the price of gold under says 520, now return back to Nelson and buy more, you should have at least 1 more than your original Gold you started (which is 15+), go to Koorong, Sell your gold so it says 0, but DO NOT PRESS O, instead, go back up to the number in your inventory, the price has risen, make it go back to 520, now go to Nelson and buy more gold, repeat the go to 0 then go to number you own, back to 520 and go to Nelson and buy more gold, it starts off slow, but don't give up, you'll see it start to rise again! Do NOT go over 50,000 though cause you'll lose all your gold and credits!! Now go buy the 30 Max Cures, the Grail Card, 2 Zero Swords and Blood Chalice for all your humans AND 5 Powered Suits, you may find yourself rushing for more because 49000 isn't enough, just go back to Nelson and sell some and repeat the steps you would after you've done the first part!!!. Trust me, you'll need the Max Cures, now give Gen and Mei-ling the Zero Swords, have at least 800+ HP and DSC and head off to RB3!! Also make sure you have two sanctuary stones, if you don't, go to the Owmi Lords Manor basement, grab one Stone and try going to Mosperiburg mountains and fight the dragons, there's another, although you shouldn't have used any of the ones you had!

Doomsday Machine

The first part is pretty easy, first of all there are some deadly lasers shooting down over the Metallic Room, you need to shut these off. First off go into these rooms, there are some harmless green lasers, go through them and stick right, you should be in a closet with a computer, press O and then go down and left. Now go down in this room and go left, this should shut off the lasers, now go to the right and go down to the Metallic Room, travel up and into the next room, here your goal is to flip a pink switch so you can get out of here. Travel until you see a ladder to your left, climb up it and go up the elevator, hit the pink switch and go back down to the ground, then go until you see another ladder on your left, climb up it, hit the switch and come down, now go up and right. There will be a ladder that you climb down and climb up to hit the pink switch thats on ground level, now go back to the first ladder, run on the side of the elevator, and go hit the pink switch. Now go back down to ground level and you should be able to go up and out of this room. When in the next room, save, and fight all the oncoming Mecs, these guys start easy and get real tough, usually you can damage, or kill, them all with one good shot out of the Hyperion Bazooka. Now once you've killed all the Mecs head to the Blue platform where you will fight, the biggest wuss for a boss you'll ever see!!

Boss Fight: Mec God

You know, you'd think the Mec God wouldn't be such a wuss, but he is, if you've gotten DSC this should be easy. Use V-Max and hit him with DSC and a good combo with CosmicRave.

Now go over the Blue platform, save and you'll be transported to a cave, travel around this cave until you get warped to a hallway, that leads to a swamp, to get warped here you MUST fight all the enemies you can, there's two pathways, travel up one, beat the enemies and try to go through a little cave, it should lead you to a dead end, or a new hallway. Now, the monsters here can transform, from my experience let them transform into a plant, but try not to get in a fight with Aquatic Animals, or you could find yourself in a fight with the dreaded Krakens! Now once in the swamp area, defeat enemies and travel from screen to screen (On the each screen do NOT go through the bottom area or you'll be warped to the caves!!). Now you'll find yourself in a desert like area, but there's green all over it, it's weird, you'll know when you see it, travel to the left, you'll either be going to a desert or back to the jungle, destroy some more enemies if you find yourself back at the Jungle. When your in the desert start fighting for your life, it's jam packed with enemies, when you think you've fought enough equip a good deal of Max Cures on all your characters, equip some Blood Chalises on your humans, give somebody a backpack and put him/her in the back row, put on heavy duty armor (Powered Suits), Pearl Hearts might help, equip the Zero Swords, make sure Babel Crumble, Sliding, Giant Swing and Suplex are all equipped for your DSC person, equip all the strongest abilities on your characters and make sure you have some repair kits and Leonard Mec has Energy Supply and his Repair Pack. Now Save and soon you'll be warped to a large Tree in the desert, T260G asks if your ready, say no! You'll go back to the desert, now put down a Sanctuary Stone and Save
NOTE: Don't give your Mecs healing items, have Leonard do repairs because his is specially built in!!, just give them all Guns. Now head right and you'll find yourself in that same scene again, now say your ready!

Final Boss Fight!: Genocide Heart

In now way, is Genocide Heart an easy boss, even to the most experienced team. He can warp you to many virtual landscapes where he does different attacks, once you've taken enough off of him at that landscape he warps you back to the room you started at. The Broken TV screens indicate how hurt Genocide Heart is now you're probably wondering why I made you build up so much? Well when your done beating up on Genocide Heart you'll see why. CARNAGE!!!! Carnage, probably the deadliest attack in the game, not only does it take off about 350-600 HP, it also can have Instant Death for ALL your humans, that's where the Blood Chalice's come in, from my experience they work, although it's a cool attack to see, it's deadly!! That's why I said, Build HP!!! If you didn't, then you for T260G's quest you will have NO FUTURE!!! He warps you to three scenes randomly, enabling him to use Carnage 3 times, you are in the TV room 4 times, but I won't ruin it for you! Now he'll warp you to a landscape, the ones are:

Snowy Mountain Scene: YES!! This is the one you want, all his attacks take no more than 100 HP off, the perfect place to doctor your team until your perfect, have anybody who doesn't have any doctoring items use defense, it doesn't do anything against Carnage but just do it!!! Once your team is to perfection start attacking. The attacks Genocide Heart uses here are: Arctic Breath - 50+ damage to random characters, Light Ball - 50+ damage to all characters, Water Cannon - 50+ damage to one. These attacks shouldn't exceed 100 if you have powered suits on. Like I told!!

Raging Ocean Scene: This ones tougher, Maelstrom is his deadliest, we all know how that works, that's where the Pearl Hearts come in! The rest are just weather related, Thunderbolt can take off 300 on one character, Tornado 200's and Flash will blind you (he never used it on me, it's just that that's what always happens to me!!). If he uses Maelstrom and you don't have Pearl Hearts on, do NOT fight, start curing, if he brings you back to the TV room after Maelstrom and you haven't cured yourself, well, you have one turn to heal yourself the best you can, although it should take out some characters in the process.

Chapel Scene: This is probably the most deadly scene, he'll attack you with attacks that hit all characters. Sacred Song does 200+ to everyone, Mec Sonata does 300+ and Sad Song lowers strength, he has some single person attacks that I don't remember, it's hard to doctor in here, but just do it to the best extent you can!!

Volcano Scene: This one he attacks you with status attacks and some hit all attacks. Stone Gas can petrify one character, that's where the grail card comes in. Have some Snake Oils with you too. There is also Spore, it can hit everybody, but it's pretty weak, Deadly Mass is just a hit for one character, Ectoplasnet takes off 1 LP I believe and Pain Powder hits for around 200 HP. It's not hard to doctor here, but you might have to through out a Snake Oil here or there.

Desert Sands Scene: The deadliest of all I think, he can hit ALL with Magnetic Storm for 300-600 damage and a bonus for Mecs! Also Heat Wave does about 200 damage to ALL. You'll be hoping for Gas Flame (100 to about two or three) and Sun Ray (200 to one) for most of the time. Doctoring here is incredibly difficult.

So what do you do?? First off any status effects he uses, counter with Snake Oils and Grail Cards. Each scene after Carnage doctor until perfect. Then hit him with DSC, Life Sprinkler, Rising Nova, Shock Soldier, Cosmic Rave (that means you need to have T260G use V-Max, start in the late first scene though). Genocide Heart has incredibly low HP but is deadly!!! You'll usually get Ice Scene, but it's all random so you might be unfortunate to skip it!!,

once you get it, heal heal heal!!! Just keep hitting him with DSC, check up on the broken monitors and he'll be toast in no time, but whatever you do, DO NOT GIVE UP!!! It took me four times to beat him!! It's random, just hope you get the easier scenes, but Genocide Heart has to do Carnage at least three times (I think he can only do it three times anyway), good luck!!
