My hex editor of choice is Hex Workshop 4.1

Note: if you do not think counting 0 1 2 3 4 5 6 7 8 9 A B C D E F 10 11 12 does not make any sense then I do not suggest trying save state hacking but do not get excited there are plenty of sites out there that are willing to tech you, just look up making game genie codes. The time you spend will be worth while.

Small contents:

- 1) General
- 2) Hero
- 3) Lufia
- 4) Aguro
- 5) Jerin
- 6) Item Hex List
- 7) Spell Hex List
- 8) Character Hex List

Notes:

\*Changing ATP and other stats will revert to their original values upon leveling up or re-equipping an item.

\*In the spell list 00 means the end of that characters spell list. If you fill the Hero痴 spell list completely, remove the 00 in front of Lufia痴 list, the Hero痴 list will then spill over into Lufia痴.

During battle if you want to have the original characters and not the regular game characters, Maxim, Guy, Selan, and Artea, set the 20ED hex value to 01, 00 equals normal characters.

Each characters stats are side by side for ATP, Weapon equipped, and so on. Just in case if you did not notice and want to set all stats to max or the same.

The character list are the characters that you have in their respective order.

1) General

20E1 - # Characters in party

20E2 -> 20E4 - Gold

20E5 -> 20E8 - Character List

20ED - 01 = Initial Characters, 00 = regular characters
